

Modeling of Interfaces and Surface Microfluidics

Guest Editor:

**Prof. Dr. Theodoros
Karakasidis**

Department of Physics, University
of Thessaly, Lamia, Greece

Deadline for manuscript
submissions:

closed (29 January 2023)

Message from the Guest Editor

Microfluidic devices can be used in many applications, such as biomedical or biological analysis or during water cleaning and purification. As the related experiments are not easy to perform at the microscale and they are relatively complex, modeling and simulation are important in the facilitation and acceleration of microfluidic device designs, such as MEMS. Surfaces play an important role at the microscale as they can affect flows. A considerable amount of research has been carried out regarding surface modification in microfluidic designs, as it can affect the flowrate through slip based on a surface's hydrophobicity/hydrophilicity or assist with ion separation in other cases. Functionalization is another important area of research. Several methods are employed in modeling, such as molecular dynamics and dissipative particle dynamics, to name a couple.

- The multiscale modeling of surfaces and interfaces in microfluidics;
- Complex hydrophilic and hydrophobic surfaces;
- Applications of modeling in biological fluid devices;
- Applications in desalination and water purification using microfluidic devices;
- Membranes made from micropores.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and
Technology, University of Turin,
Via P. Giuria 9, 10125 Turin, Italy

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
