This Special Issue covers a wide range of topics related to mass/energy transfer, as well as how MATLAB can be used to enhance understanding and solve complex engineering problems. The key areas include the following:

1. Fundamentals of mass/energy transfer.
2. Industrial applications.
3. MATLAB tools and techniques.
4. Numerical methods implemented using MATLAB for mass/energy transfer simulations.
5. Optimization and design.
6. Data analysis and visualization tools in MATLAB for interpreting experimental and simulation results in mass/energy transfer studies.

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.
