## Design Processes via Manipulation of Nanoparticles and Their Suitability for Gas Sensors

Guest Editors:

**Dr. Gugu Hlengiwe Mhlongo**

Council for Scientific and  
Industrial Research (CSIR),  
Pretoria 0001, South Africa

**Dr. Dimitra Papadaki**

Group of Building Environmental  
Studies, National and  
Kapodistrian University of  
Athens, Physics Department, 157  
84 Athens, Greece

Deadline for manuscript  
submissions:

**closed (15 May 2024)**

### Message from the Guest Editors

Innovative developments in the nanotechnology field have helped nanomaterials to attain unique chemical and physical properties that are completely different from those of the bulk, all of which are known to play a key role in modifying the thermal and chemical properties of materials. Thus, nanoparticles are considered most appropriate for various specialist applications. Additionally, nanoparticles have a high surface area and surface-to-volume ratio because of their small particle size, and this provides an additional active site for electron transport, while enhanced defects lead to enhanced surface activity. Therefore, taking advantage of these unique properties enables the fabrication of extremely sensitive and stable gas sensors displaying rapid response–recovery times, and low power consumption. These properties are most crucial for sensor performance characteristics and must be considered when designing nanoparticles suitable for gas sensing. In fact, numerous approaches have been used to produce and stabilize metal nano-enabled particles in organic and aqueous media.

## Editor-in-Chief

### **Prof. Dr. Giancarlo Cravotto**

Department of Drug Science and  
Technology, University of Turin,  
Via P. Giuria 9, 10125 Turin, Italy

## Message from the Editor-in-Chief

*Processes* (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
