Message from the Guest Editor

Dear Colleagues,

Electrochemical technology is a promising option for preventing and minimizing industrial pollution problems caused by wastewater. Electrochemical treatment is considered a “clean process” as it only uses electrons as a reactant, and it also has other advantages, including high energy efficiency; easy handling; safety; and versatility.

It is an attractive alternative for the treatment of effluents containing organic compounds through direct or indirect electrooxidation reactions. Advanced oxidative processes based on electrochemical technology are called Advanced Electrochemical Oxidative Processes (EAOPs). The combination of these processes has shown that degradation rates are higher when compared to the degradation rates of individual processes. As a major advantage, EAOPs use as inputs the energy necessary to carry out electrolysis and that used by the UV radiation source, with the only reactants being electrons and photons.

Therefore, we invite you to submit original research to this Special Issue of *Processes*, entitled “The Role of Electrochemical Technology in Wastewater Treatment”.

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes*. *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**,
SCIE (Web of Science), **Ei Compendex**, **Inspec**, **AGRIS**, and **other databases**.

Journal Rank: CiteScore - Q2 (Chemical Engineering (miscellaneous))
