Message from the Editor-in-Chief
Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with increasing Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly encourage you to publish your best research in Remote Sensing.

Author Benefits
Open Access
Unlimited and free access for readers

No Copyright Constraints
Retain copyright of your work and free use of your article

Impact Factor 3.036 (2015 Journal Citation Reports®)

Thorough Peer-Review

Coverage by Leading Indexing Services
SCIE-Science Citation Index Expanded (Thomson Reuters), Compendex(Ei)/Engineering Village (Elsevier), Scopus (Elsevier)

Remote Sensing Ranked No.1 Open Access Journal and 5th among All Journals in the Remote Sensing Subject Category

No Space Constraints, No Extra Space or Color Charges
No restriction on the length of the papers, number of figures or colors

Discounts on Article Processing Charges (APC)
If you belong to an institute that participates with the MDPI membership program
More Information about This Journal

Aims and Scope

Remote Sensing (ISSN 2072-4292) publishes regular research papers, reviews, letters and communications covering all aspects of remote sensing science, from sensor design, validation/calibration, to its application in geosciences, environmental sciences, ecology and civil engineering. Our aim is to publish novel/improved methods/approaches and/or algorithms of remote sensing to benefit the community, open to everyone in need of them. There is no restriction on the length of the papers or colors used. The method/approach must be presented in detail so that the results can be reproduced. Moreover, authors are encouraged to submit their original codes/data as supplementary information for the paper.

The scope of Remote Sensing includes:

- Multi-spectral and hyperspectral remote sensing
- Microwave remote sensing
- Lidar and laser scanning
- Unmanned aerial vehicles
- Satellite image processing and pattern recognition
- Data fusion and data assimilation
- Remote sensing applications
