Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend Remote Sensing for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access Unlimited and free access for readers
No Copyright Constraints Retain copyright of your work and free use of your article
Impact Factor 3.036 (2015 Journal Citation Reports®)
Thorough Peer-Review
Coverage by Leading Indexing Services SCIE-Science Citation Index Expanded (Clarivate Analytics, formerly Thomson Reuters), Compendex(Ei)/Engineering Village (Elsevier), Scopus (Elsevier)
Remote Sensing Ranked No.1 Open Access Journal and 5th among All Journals in the Remote Sensing Subject Category
No Space Constraints, No Extra Space or Color Charges No restriction on the length of the papers, number of figures or colors
Discounts on Article Processing Charges (APC) If you belong to an institute that participates with the MDPI membership program
Aims and Scope

*Remote Sensing* (ISSN 2072-4292) publishes regular research papers, reviews, letters and communications covering all aspects of remote sensing science, from sensor design, validation/calibration, to its application in geosciences, environmental sciences, ecology and civil engineering. Our aim is to publish novel/improved methods/approaches and/or algorithms of remote sensing to benefit the community, open to everyone in need of them. There is no restriction on the length of the papers or colors used. The method/approach must be presented in detail so that the results can be reproduced. Moreover, authors are encouraged to submit their original codes/data as supplementary information for the paper.

The scope of *Remote Sensing* includes:

- Multi-spectral and hyperspectral remote sensing
- Microwave remote sensing
- Lidar and laser scanning
- Unmanned aerial vehicles
- Satellite image processing and pattern recognition
- Data fusion and data assimilation
- Remote sensing applications
