Message from the Guest Editor

Dear Colleagues,

This Special Issue will review the state of the art in the retrieval and exploitation of vegetation fluorescence, and the derivation of actual photosynthetic efficiency of vegetation by means of the synergistic integration of vegetation fluorescence with other related measurements about vegetation status, conditions and functioning.

Articles in the following topics are invited for this Special Issue:

- Multiple methods for the retrieval of vegetation fluorescence
- Field methods to measure vegetation fluorescence emission
- Retrieval methods based on solar Fraunhofer lines, atmospheric terrestrial absorption lines
- Statistical retrieval methods based on spectral decomposition
- Modeling fluorescence emission at leaf, canopy and ecosystem levels

Prof. Dr. Jose Moreno
Guest Editor

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), EI Compendex, INSPEC (IET) and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 31 days after submission; acceptance to publication is undertaken in 7 days (median values for papers published in this journal in 2016).
