Deadline for manuscript submissions:

**30 June 2018**

### Message from the Guest Editors

Dear Colleagues,

The workshop and proposed Special Issue focuses on global systems for monitoring wildfires, as well as the missions providing data for this purpose, and the modeling endeavors with regards to climate change, considering the contribution of forest fires. We invite you to submit articles on the following topics:

- (1) Studies on the impact of climate change on forest fires occurrence and severity;
- (2) Contribution of the current and upcoming Sentinel missions on forest fire research;
- (3) Exploitation of Big Data and dense satellite time-series for fire disturbance monitoring;
- (4) Improved methods of modelling post-fire vegetation trends;
- (5) Improved capabilities for sharing / understanding / modelling large-volume fire data sets;
- (6) Methods of forest fire detection and monitoring on multiple scales

Prof. Ioannis Gitas

Dr. Vincent Ambrosia

Dr. Chariton Kalaitzidis
