Biomarkers and Nanosensors: New Approaches for Biology and Medicine

Message from the Guest Editors

Dear Colleagues,

In the past decade, biomarker research has experienced phenomenal growth powered by novel molecular readout (nano) technology in genomics, proteomics and metabolomics. The biological markers of disease are now enabling many new and innovative applications in the field of medicine, molecular biology and biotechnology. This special issue will focus on convergence of biomarkers and nanotechnology based molecular readout systems and clinical applications.

Prof. Dr. Matt Trau
Dr. Muhammad J. A. Shiddiky

Deadline for manuscript submissions:
closed (29 February 2012)
Message from the Editorial Board

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.
