First Experiences with Chinese Gaofen-3 SAR Sensor

Message from the Guest Editors

Dear Colleagues,

The Chinese Gaofen-3 (GF-3) satellite was launched on 10 August, 2016, by the China Academy of Space Technology (CAST), and has been in operation since January, 2017. With its C-band Synthetic Aperture Radar (SAR) sensor, featuring a large radar antenna that is 15 m in length, GF-3 is able to image the Earth’s surface in all weather conditions, regardless of whether it is day or night.

Submissions are encouraged to cover a broad range of topics, which may include, but are not limited to, the following:

- Mission status and planned/operational products
- Satellite System Design/Manufacture
- Calibration and validation activities of Gaofen-3 and instrument characteristics
- Status of collaborative ground segments (CGS)
- SAR polarimetry
- SAR interferometry
- Marine and maritime applications
- Land cover/Land use
- Geohazards and disaster monitoring
- Critical infrastructure surveillance
- Target detection
- Tools, toolboxes and algorithms for analyzing Gaofen-3 data

Deadline for manuscript submissions: 31 December 2018
Message from the Editorial Board

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.
