Message from the Guest Editors

Dear Colleagues,

It is commonly agreed that you can't manage an organization if you do not measure its activity through the collection of business data. If this is evident for private companies, Grimaldi D., Carrasco C. and Fernandez V. (2018) introduce how it may be also correct for the management of cities. This Special Issue aims at understanding how data science opens new perspectives to manage cities differently, more efficiently and better than has been the case so far. We have all read about the strength of data, but likely we do not recognize how to insert a data strategy into the urban transformation agenda of our cities. Our Special Issue will describe and analyse what urban data science means and how it can be applied to cope with the urban challenges of energy, transport, pollution, and waste management.

Message from the Editor-in-Chief

Smart Cities provides an advanced forum for the dissemination of information on the science and technology of smart cities. It publishes reviews, regular research papers (articles) and communications in all areas of research concerning smart cities. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers so that the full experimental results can be reproduced. Manuscripts regarding research proposals and research ideas are particularly welcome.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [Inspec](#), [AGRIS](#), and [other databases](#).

Journal Rank: CiteScore - Q1 (*Urban Studies*)
