Message from the Guest Editors

Dear Colleagues,

This Special Issue is seeking original, unpublished papers that describe recent advances in various field of food industry and food supply chain ecosystems toward economic, environmental and social sustainability. The required target is to provide evidences of where and how quantitative models, methods and support-decision tools, as well as advanced technology, can aid the design and management of more sustainable food operations from-farm-to-fork, throughout cropping, processing and packaging, storage and distribution activities.

This Special Issue invites timely and advanced research papers, but even case studies supported by multi-disciplinary quantitative approaches for an effective assessment of the as-is food operations and a pro-active re-design toward sustainability.

Dr. Riccardo Accorsi
