Sustainable Water Management

Message from the Guest Editor

Sustainable water management is part of sustainable development; meeting the needs of the present without compromising the ability of future generations to meet their own water needs. Achieving sustainable water management requires a multidisciplinary and holistic approach in which technical, environmental, economic, landscape aesthetic, societal and cultural issues are addressed. Further research is required to guide the development of appropriate sustainable water management measures, strategies and policies.

The wider research community is therefore invited to contribute to this special issue by submitting comprehensive critical reviews and original research articles.

Author Benefits

- **Open Access:** free for readers, with publishing fees paid by authors or their institutions.
- **High visibility:** indexed by the Science Citation Index Expanded, the Social Sciences Citation Index (Web of Science) and other databases.
- **Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 32 days after submission; acceptance to publication is undertaken in 6 days (median values for papers published in this journal in 2016).
