Special Issue - Open for Citations

Asymmetric Catalysis

Message from the Guest Editor

Dear Colleagues,

Symmetry invites manuscripts for the Special Issue on Asymmetric Catalysis, a field of central importance for the production of enantiomerically pure chiral drugs, natural products, and important molecules for materials chemistry. This issue is devoted to the recent aspects of asymmetric organo- and metal-catalysis, combination of organocatalysis with metal- and/or biocatalysis.

Both original research papers and reviews dealing with the design, synthesis and use of new enantioselective catalytic systems that promote the formation of versatile chiral building-blocks, fine chemicals, pharmaceuticals, flavors, biologically active molecules, and materials will be considered.

Prof. Dr. Svetlana Tsogoeva
Guest Editor

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MathSciNet (AMS), Scopus and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 29 days after submission; acceptance to publication is undertaken in 7 days (median values for papers published in this journal in 2016).
