Message from the Guest Editor

Globally, venomous bites and stings are significant public health issues. In general, the most affected are the rural farming communities in tropics who mostly have poor access to healthcare. As a result of the socioeconomic factors of the vulnerable communities, which limit reporting, accurate estimates of the global burden of venomous bites and stings remain far from reality. Even presently, many victims of bites and stings seek treatment from healers and traditional practitioners, and hence never appear in the national health statistics of their countries.

This Special Issue of *Toxins* presents the most recent data on the long-term effects of bites and stings, covering a wide range of topics, including epidemiology, clinical effects, and mechanistic insights on the clinical effects.

Message from the Editor-in-Chief

Toxinology is an incredibly diverse area of study, ranging from field surveys of environmental toxins to the study of toxin action at the molecular level. The editorial board and staff of *Toxins* are dedicated to providing a timely, peer-reviewed outlet for exciting, innovative primary research articles and concise, informative reviews from investigators in the myriad of disciplines contributing to our knowledge on toxins. We are committed to meeting the needs of the toxin research community by offering useful and timely reviews of all manuscripts submitted. Please consider *Toxins* when submitting your work for publication.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.**

Journal Rank: JCR - Q1 (Toxicology) / CiteScore - Q1 (Toxicology)
