Understanding Mycotoxin Occurrence in Food and Feed Chains

Message from the Collection Editor

Dear Colleagues,

Health risks related to mycotoxins have increasingly needed to be considered in recent years; research activity moved from monitoring mycotoxins and associated fungi, to using a system approach. The patho-system has, for example, been extensively studied in order to take advantage of powerful tools available for understanding host-fungi interaction and resulting metabolites. Increasing knowledge frequently leads to the discovery of where gaps need to be filled and the endless discovery of compounds and affected matrices show that new research is currently needed. Nevertheless, several steps have been taken to explain the occurrence of mycotoxins and this is crucial for mitigation actions and for minimizing human and animal exposure.

Author Benefits

- **Open Access:** free for readers, with publishing fees paid by authors or their institutions.
- **High visibility:** indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed) and other databases. Full-text available in PubMed Central.
- **Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 7 days (median values for papers published in this journal in 2016).
- **Sections:** published in six topical sections.
