Deadline for manuscript submissions:

**closed (15 July 2014)**

### **Message from the Guest Editor**

Dear Colleagues,

A few decades after the discovery of human immunodeficiency viruses as the causal pathogens for AIDS, an effective AIDS vaccine has not been successfully developed to curb the global epidemic of HIV infections. HIV employs many tactics to prevent induction of protective T and B cell immune responses. Facing such a huge challenge, we hope this "AIDS Vaccine" special issue will offer a platform for publication of cutting-edge results in the AIDS vaccine research field.

Previous Special Issue published in *Viruses*: "[AIDS Vaccine](#)"

Prof. Dr. Feng Gao  
*Guest Editor*

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Viruses* (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

## Author Benefits

**Open Access:** free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.**

**Journal Rank:** JCR - Q2 (*Virology*) / CiteScore - Q1 (Infectious Diseases)
