Message from the Guest Editors

Dear Colleagues,

The International Society for Viruses of Microbes (ISVM) represents large scientific community studying viruses of archaea, bacteria, protists and fungi. One of its activities is a biannual multidisciplinary meeting, which covers the full range of current developments in the field of viruses of microbes, from structural biology to ecology and from fundamental to applied research.

In the Viruses of Microbes Special Issues published in Viruses, we hope to collect series of research articles which will reflect the full diversity of this field with current and future trends of fundamental and applied research.

Dr. Tessa E.F. Quax

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.
High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed) and other databases. Full-text available in PubMed Central.
Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 33 days after submission; acceptance to publication is undertaken in 8 days (median values for papers published in this journal in 2016).
Editorial Section highlighting important developments to a broad audience of virologists and written by leading experts in the field.
