New Developments in Citywide Inclusive Sanitation (CWIS)

Guest Editors:

Prof. Dr. Damir Brdjanovic

Department of Water Supply,
Sanitation and Environmental
Engineering, IHE Delft Institute
for Water Education, Delft, The
Netherlands

Dr. Claire Furlong

IHE Delft Institute for Water
Education, Delft, The
Netherlands

Dr. Konstantina Velkushanova

IHE Delft Institute for Water
Education, Delft, The
Netherlands

Deadline for manuscript
submissions:

closed (30 June 2023)

Message from the Guest Editors

The urban sanitation challenge in low-and middle-income countries is becoming more urgent due to rapid urbanization, while only 39% of urban dwellers have access to safely managed sanitation services. Addressing this need for sustainable urban sanitation has proved challenging due to the complexity of the enabling environment for service delivery. Citywide inclusive sanitation (CWIS) aims to address urban sanitation challenges through provision of access to both sewerred and non-sewerred sustainable sanitation for all. The focus of CWIS is on public service provision and the enabling environment and viewing the city as a unit. CWIS has been gaining momentum in the last decade and has resulted in different innovations and initiatives, including the development of implementation tools, business models for urban sanitation, technology development, and governance approaches.

The theme of this *Special Issue* is on New Developments in CWIS, and we seek to capture the most up-to-date original research and case studies to benefit practitioners, decision makers, scientists, and engineers.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
