Energy Efficient Management of Water Collection, Treatment, Storage and Distribution

Guest Editors:

Prof. Dr. Mathias Ernst

Institute for Water Resources and Water Supply, Technische Universität Hamburg (TUHH), Am Schwarzenberg-Campus 3 E, D-21073 Hamburg, Germany

Dr. Wolf Merkel

IWW Water Centre, CEO

Deadline for manuscript submissions:

closed (30 June 2018)

Message from the Guest Editors

Dear Colleagues,

Water collection, treatment, storage and distribution are inevitable linked with energy consumption. Current systems are primarily designed for uninterrupted service and high product water quality. As a result, substantial savings and recoveries of electrical, potential and thermal energy exist across all parts of current water supply systems. This Special Issue of “Water” will present an overview about ongoing research projects and their current status regarding the topic “water and energy”. The issue welcomes scientific contributions about the evaluation, simulation and reduction of energy consumptions in all sectors of current drinking water supply systems. Contributions regarding energy recovery (electrical, potential, thermal), the exploitation of energy savings in network design and operation, as well as competitive, innovative and energy efficient water treatment technologies are highly encouraged.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
