

Biomaterials Approaches for Cancer Research

Guest Editor:

Dr. Sue Anne Chew

University of Texas at Brownsville (USA)

E-Mail: SueAnne.Chew@utb.edu

Deadline for manuscript submissions:

31 March 2016

Special Issue website:

[mdpi.com/journal/jfb/special_issues/
Biomater-Cancer](http://mdpi.com/journal/jfb/special_issues/Biomater-Cancer)

Publish in *JFB* - Take **advantage** of:

- **Open Access**
(unlimited and free access by readers)
- **High publicity and more frequent citations**
(as indicated by several studies)
- **Thorough peer review**
- **Fast manuscript handling time**
- **Coverage by leading indexing services**
(citations available in PubMed, full-text archived in PubMed Center)
- **Immediate publication upon acceptance**
- **No space constraints**
(no restriction on the length of the papers, electronic files can be deposited as supplementary material)

Dear Colleagues,

Over the years, the field of biomaterials has emerged as an important tool in the fight against cancer. Biomaterials approaches are applied to improve methods of studying cancer in vitro. Different materials are used to create 3D cell culture systems, which can act as intermediate stages between 2D culture and animal models. Biomaterials are also currently used in the detection and diagnosis of cancer; such diagnostics include the development of biomaterials-based immunoassays, which detect biomarkers and biomaterials to facilitate the delivery of contrast agents for imaging. Furthermore, biomaterials also play an integral role in the advancement of cancer therapies. A wide spectrum of biomaterials are being applied for the targeted and sustained delivery of therapeutic agents. Due to the difficulties and high costs of developing new therapeutics and detection and diagnosis methods, focus should be placed on applying biomaterials that optimize currently available approaches. Biomaterial properties, such as size, shape, charge, surface chemistry, morphology, and physiochemical properties can be easily tailored to tackle specific challenges in cancer. Thus, biomaterials enable useful, innovative approaches for improving the current technologies available for studying, detecting, and treating cancer.

Dr. Sue Anne Chew

Guest Editor

Special Issue Topics:

- cancer therapy
- cancer detection and diagnosis
- 3d culture systems
- drug delivery
- imaging
