

Supplementary Figure S3: Stem Quality Traits of 10 Quinoa genotypes studied during two years at different cutting and spacing levels; A) SCP: Stem Crude Protein, B) SCF: Stem Crude Fat, C) SADF: Stem Acid Detergent Fibre, D) SNDF: Stem Neutral Detergent Fibre, E) SMois: Stem Moisture. The sub-plots (a, b, c) show the response of genotypes to cuttings (a), spacing effect (b) and years (c), respectively. Means are plotted with standard error bars and the letters indicate the Tukey's post-hoc results. Means which share the same letters are not significantly different at $p < 0.05$. Dotted horizontal line in the plot represent the overall mean of the variable under study.
