

Supplementary Figure S2: Leaf Quality Traits of 10 Quinoa genotypes studied during two years at different cutting and spacing levels, A) LCP: Leaf Crude Protein, B) LCF: Leaf Crude Fat, C) LADF: Leaf Acid Detergent Fibre, D) LNDF: Leaf Neutral Detergent Fibre, E) LMois: Leaf Moisture. The sub-plots (a, b, c) show the response of genotypes to cuttings (a), spacing effect (b) and years (c), respectively. Means are plotted with standard error bars and the letters indicate the Tukey's post-hoc results. Means which share the same letters are not significantly different at $p < 0.05$. Dotted horizontal line in the plot represent the overall mean of the variable under study.
