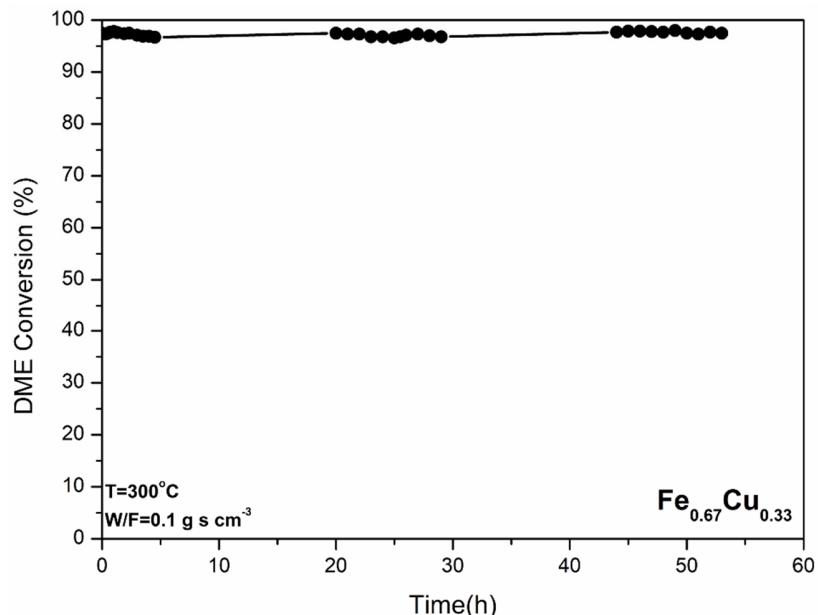

Figure S3. Stability test of Fe_{0.67}Cu_{0.33} catalyst. Reaction conditions: 900 ppm DME and 8% O₂, T=300 °C, W/F = 0.1 g s cm⁻³

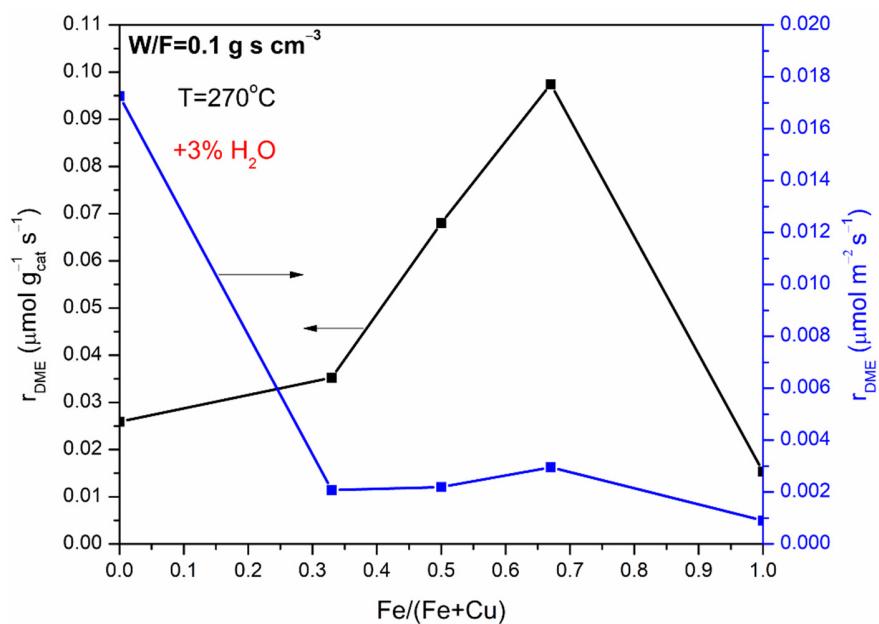

Figure S4. Variation of DME oxidation rates in the presence of H₂O vapor expressed per catalyst weight (in $\mu\text{mol g}_{\text{cat}}^{-1} \text{s}^{-1}$, left axis) and specific reaction rates (in $\mu\text{mol m}^{-2} \text{s}^{-1}$, right axis) with the Fe/(Fe + Cu) molar ratio. Reaction conditions: 900 ppm DME 8% O₂ and 3% H₂O, reaction temperature=270 °C, W/F = 0.1 g s cm⁻³.

DME oxidation over metal oxide catalysts is scarcely reported in the literature. Nevertheless, based on the reported results, we have calculated the specific reaction rates in DME oxidation and the results are summarized in Table S2.

Table S2. Summary of the literature in DME oxidation over (mixed) oxide catalysts.
