SUPPLEMENTARY MATERIALS

Table S1: Values of exposure factors used in health risk assessments due to TMTs in soils from banks of River Rwizi, Mbarara City, Uganda

Factor	Description (units)	Factor values	
		Children	Adults
C_{TMT}	Concentration of the TMT in the soils (mg kg^{-1})	This study	This study
$IngRS$	Ingestion rate (mg day^{-1})	200	100
$IngRV$	Fresh food ingestion rate(kg/person/day)	0.085	0.085
EXF	Exposure frequency (days year^{-1})	350	350
EXD	Exposure duration (years)	6	30
FI	Fraction ingested from the contaminated source (unitless)	1.0	1.0
$InhRS$	Inhalation rate of soil as dust ($\text{m}^3 \text{day}^{-1}$)	200	100
CVF	Conversion factor (kg mg^{-1})	1×10^{-6}	1×10^{-6}
W_{ab}	Body weight (kg)	15	60
T _{aet}	Average time (days)	Non-carcinogenic: EXD × 365 days year ⁻¹ ; carcinogenic: 60 years × 365 days year ⁻¹	
SAF	Surface area of skin exposed to soil as dust (cm^2)	2800	5700
PEF	Particular emission rate ($\text{m}^3 \text{kg}^{-1}$)	1.316×10^9	1.316×10^9
AF	Skin adherence factor (mg cm^{-2})	0.2	0.7
DAF	Dermal absorption factor (unitless)	0.001	0.001

Based on US EPA [1, 2], Ferreira-Baptista and De Miguel [3], Ajeh et al. [4] and Adedokun et al. [5].

Table S2: Classification values of pollution and risk indices used in study of TMTs in soils from banks of River Rwizi, Mbarara City, Uganda

Pollution and risk indicators	Classification values	Description
Contamination factor (CFs) [6]	CF<1 1≤CF<3 3≤CF<6 CF>6	Low contamination Moderate contamination Considerable contamination Very high contamination
Geo-accumulation index (I_{geo}) [7]	$I_{geo}<0$ (class 0) $0 < I_{geo} < 1$ (class 1) $1 < I_{geo} < 2$ (class 2) $2 < I_{geo} < 3$ (class 3) $3 < I_{geo} < 4$ (class 4) $4 < I_{geo} < 5$ (class 5) $I_{geo} > 5$ (class 6)	Practically uncontaminated Low to median contamination Median contamination Median to strong contamination Serious contamination Serious to extreme contamination Extreme contamination
Pollution Load index (PLDI)	PLDI < 1 PLDI > 1	Unpolluted Polluted
Ecological risk (E_R^i and PERI) [6]	$E_R^i < 40$; PERI < 95 $40 \leq E_R^i \leq 80$; $95 \leq \text{PERI} \leq 190$ $80 \leq E_R^i \leq 160$; $190 \leq \text{PERI} \leq 380$ $160 \leq E_R^i \leq 320$; $\text{PERI} \geq 380$ $320 \leq E_R^i$	Low contamination Moderate contamination Considerable contamination High contamination Very high contamination

Table S4: Estimated daily intake, hazard quotients, and indices for intake of manganese in leafy vegetables from the banks of River Rwizi, Mbarara City, Uganda.

Age Group	Sampling Site	Estimated daily intake of manganese ($\text{mg kg}^{-1} \text{day}^{-1}$)						Hazard Quotient				Hazard Index
