

Figure S1. Select hematology and albumin levels of animals exposed to an EEV enriched preparation of monkeypox virus. Hematology using EDTA whole blood was performed on a Coulter AcT10. Chemistry was performed using a General Chemistry Panel on Piccolo analyzers. (A) White blood cells (WBC); (B) number of lymphocytes (LY #); (C) platelets (PLT); (D) albumin. Reference ranges (grey boxes) were provided by USAMRIID with the exception of WBC [32].
