

Supplemental Material: Correspondence of Neutralizing Humoral Immunity and CD4 T Cell Responses in Long Recovered Sudan Virus Survivors

Ariel Sobarzo, Spencer W. Stonier, Andrew S. Herbert, David E. Ochayon, Ana I. Kuehne, Yael Eskira, Shlomit Fedida-Metula, Neta Tali, Eli C. Lewis, Moses Egesa, Stephen Cose, Julius Julian Lutwama, Victoria Yavelsky, John M. Dye and Leslie Lobel

Controls

SUDV survivors

Figure S1. Flow cytometry CD8 T cell analysis of whole blood from survivors and non-infected controls following SUDV whole antigen stimulation. Represented plots depict IFN γ and TNF α cytokine responses in CD8 T cells following 22 h of stimulation with inactivated SUDV antigen of controls; C1 and C5 (A); and SUDV survivors with no detected CD8 T cell response; S6 and S10 (B) and detected S1 and S12 CD8 T cell response (C).
