Supplementary Materials: Enhanced Antibacterial Activity of *ent*-labdane Derivatives of Salvic Acid (7 α -hydroxy-8(17)-*ent*-Labden-15-Oic Acid): Effect of Lipophilicity and the Hydrogen Bonding Role in Bacterial Membrane Interaction

Javier Echeverría ^{1,*}, Alejandro Urzúa ², Loreto Sanhueza ³ and Marcela Wilkens ⁴

1. General Information

NMR spectra were obtained on a Bruker DPX 400 spectrometer (400 MHz for ¹H and 100 MHz for ¹³C). Samples were dissolved in CDCl₃, and the spectra were calibrated using TMS signals. The chemical shifts are given in ppm. The carbon atoms in the alkyl chains of the acyloxy groups were numbered by labelling the carbon atom of the carbonyl group as number one and subsequently increasing towards the methyl terminus of the acyl chain.
