Supplementary Figure 1. Broccoli ('Gypsy' cultivar, grown in field) individual tissue biomass (Fresh weight) percentage to total biomass. The data collected from 7 individual mature broccoli plants. Average of total biomass was 776 g per plant.

Supplementary Figure 2. Total phenolic content gallic acid equivalent (GAE) mg per g of DW (A) and DPPH antioxidant activity (B) in different tissues of broccoli (12.5 mg DW/mL). Vitamin C was used as positive control (125 μ g/mL).
