

Supplementary table 1. Primers used in the experiments

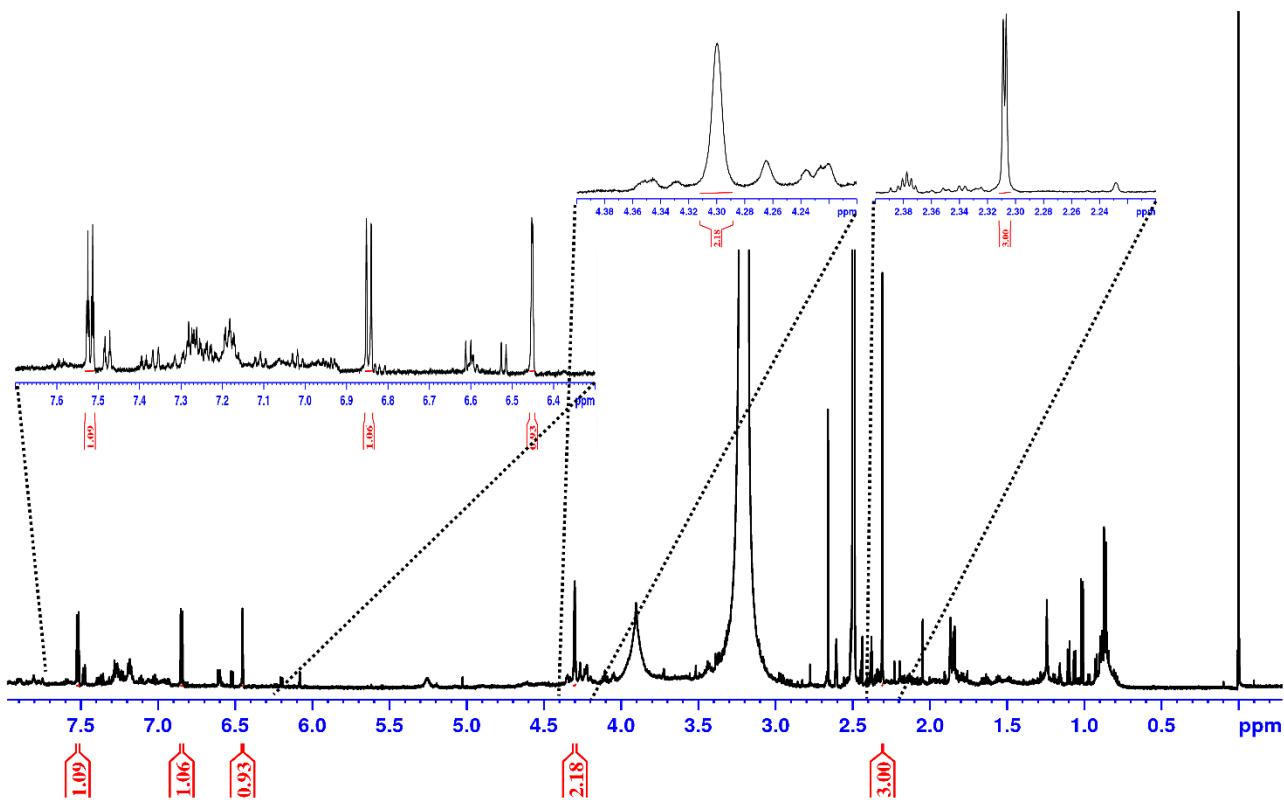

Primer name	Sequence 5' → 3'	Function
PKS8-O1	GGTCTTAAUGGATCTAATTCTAGACCCCTGCATGG	Overexpression
PKS8-O2	GGCATTAUAGTGTGATACAGGATGAACAGAACAA	Overexpression
PKS8-O3	GGACTTAAUGCCTCTCAAATTCAACCATGGC	Overexpression
PKS8-O4	GGGTTAAUATCGTAGCTATACATGATGGTATGTGTTGG	Overexpression
PKS8-V1	CCTGGTATGAAATGATTAGCGGAGT	Verification of mutants
PKS8-V2	CTTCACAAAGTGTGCACCTCTGAA	Verification of mutants
PKS8-V3	ATGGTGACCTCACACGAGTGGC	Verification of mutants
PKS8-V4	AACAACGGCGTGCAGTTGAT	Verification of mutants
HYG-58-1	AGCTGCGCCGATGGTTCTACAA	Verification of mutants
HYG-58-2	GCGCGTCTGCTGCCATACAA	Verification of mutants

Supplementary figure 1. Extracted ion chromatograms for the protonated ions $[M+H]^+$ of gibepyrone A, B, D, E and prolipyrene B with inserted mass spectra for the individual peaks.

Supplemental figure 2: ^1H NMR spectrum of gibepyronD (600 MHz, 25°C, CD_3OD) including two magnifications over regions of interest. Integrals are shown in red calibrated to 3.00 H for the methyl group at 2.11 ppm. Axis calibrated by TMS = 0.

Supplemental figure 3: ¹H NMR spectrum of prolipyrone B (600 MHz, 50°C, DMSO-d₆) including three magnifications over regions of interest. Integrals are shown in red calibrated to 3.00 H for the methyl group at 2.31 ppm. Axis calibrated by TMS =0.
