Table of contents

- 1. Synthetic procedure referred to in Scheme 2. (S2)
- Copies of ¹H-NMR and ¹³C-NMR spectra of compounds II, 2a, 3a, 5a-k, 7a-c, and 8a-c. (S3-S24)
- 3. References. (S2)

Procedure referred to in Scheme 2

To a stirred solution of 2-chloro-*N*,*N*-dimethyl-3-oxobutanamide (**A**) (1 mmol) in AcOH (4 mL), finely crashed potassium thiocyanate (**B**) (1.5 mmol) was added at room temperature. After 1 hour, *tert*-butyl hydrazinecarboxylate (**C**) (1 mmol) was added portionwise and quickly. In a short time, the reaction mixture turned yellow and was left to stir until the disappearance of **A** (TLC check, 2 h). The crude reaction mixture was then treated with a diluted solution of 5% NaOH until neutrality, extracted with EtOAc (50 mL), and washed with water (3 × 10 mL). The combined organic phases were dried (Na₂SO₄), concentrated under reduced pressure, and purified by column chromatography eluting with cyclohexane:EtOAc mixture (from 1:1 to pure EtOAc) to afford **II** as major product.

tert-Butyl (5-((dimethylamino)carbonyl)-2-imino-4-methyl-1,3-thiazol-3(2*H*)-yl)carbamate (**II**): Yield 48% (144.2 mg) white powder from EtOAc / light petroleum ether; Mp 157–161 °C (dec.); ¹H-NMR (400 MHz, DMSO-*d*₆) δ 1.34 and 1.43 (2 s, 9 H, OBu^{*t*}), 1.90 (s, 3 H, CH₃), 2.94 [s, 6 H, N(CH₃)₂], 8.21 (br s, 1 H, NH), 9.48 (br s, 1 H, NH); ¹³C-NMR (100 MHz DMSO-*d*₆) δ 12.7, 27.6, 27.8, 36.7, 80.5, 98.5, 137.0, 154.6, 158.0, 162.8; IR (Nujol, v, cm⁻¹): 3320, 3254, 3200, 1736, 1633, 1607; MS *m*/*z* (ESI): 301.15 (M + H)⁺; calcd. for C₁₂H₂₀N₄O₃S (300.38): C, 47.98; H, 6.71; N, 18.65; found: C, 48.07; H, 6.75; N, 18.69 [1].

The partition of some signals here, as well as in the following cases, is caused by the N1-amide rotameric effect [2].
