X-Ray crystallography data of 5

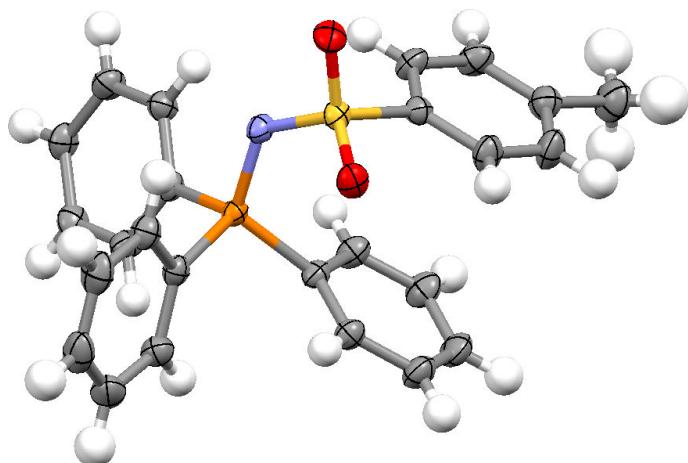

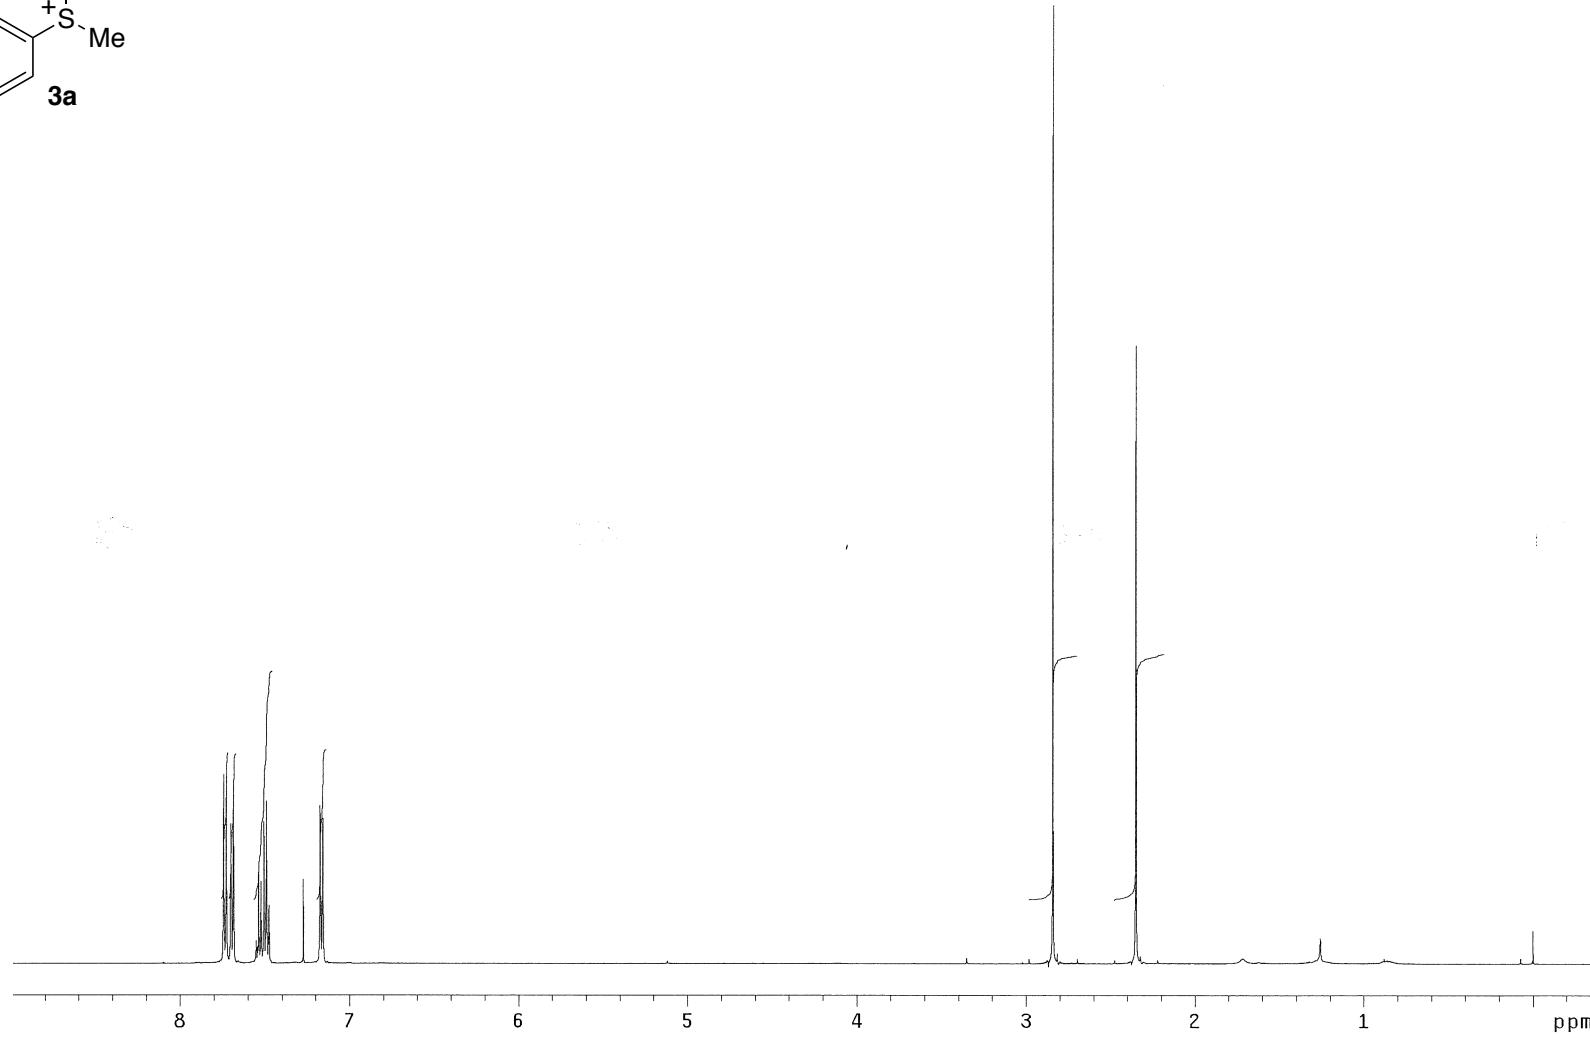

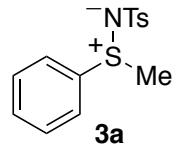

Figure S1. X-Ray crystal structure of 5.

Single crystals of product **5** suitable for X-ray crystallographic analysis were obtained by slow crystallization from dichloromethane solution. X-ray diffraction data for **5** were collected on Rigaku RAPID II Image Plate using graphite-monochromated MoK α radiation ($\lambda = 0.71073 \text{ \AA}$) at 173 K. The unit cell of 8.9064(5), 10.5791(6), 13.0086(9), 99.870(7), 107.920(8) and bond metrics for **5** matched the previously reported compound.¹
