

Supplementary Materials:

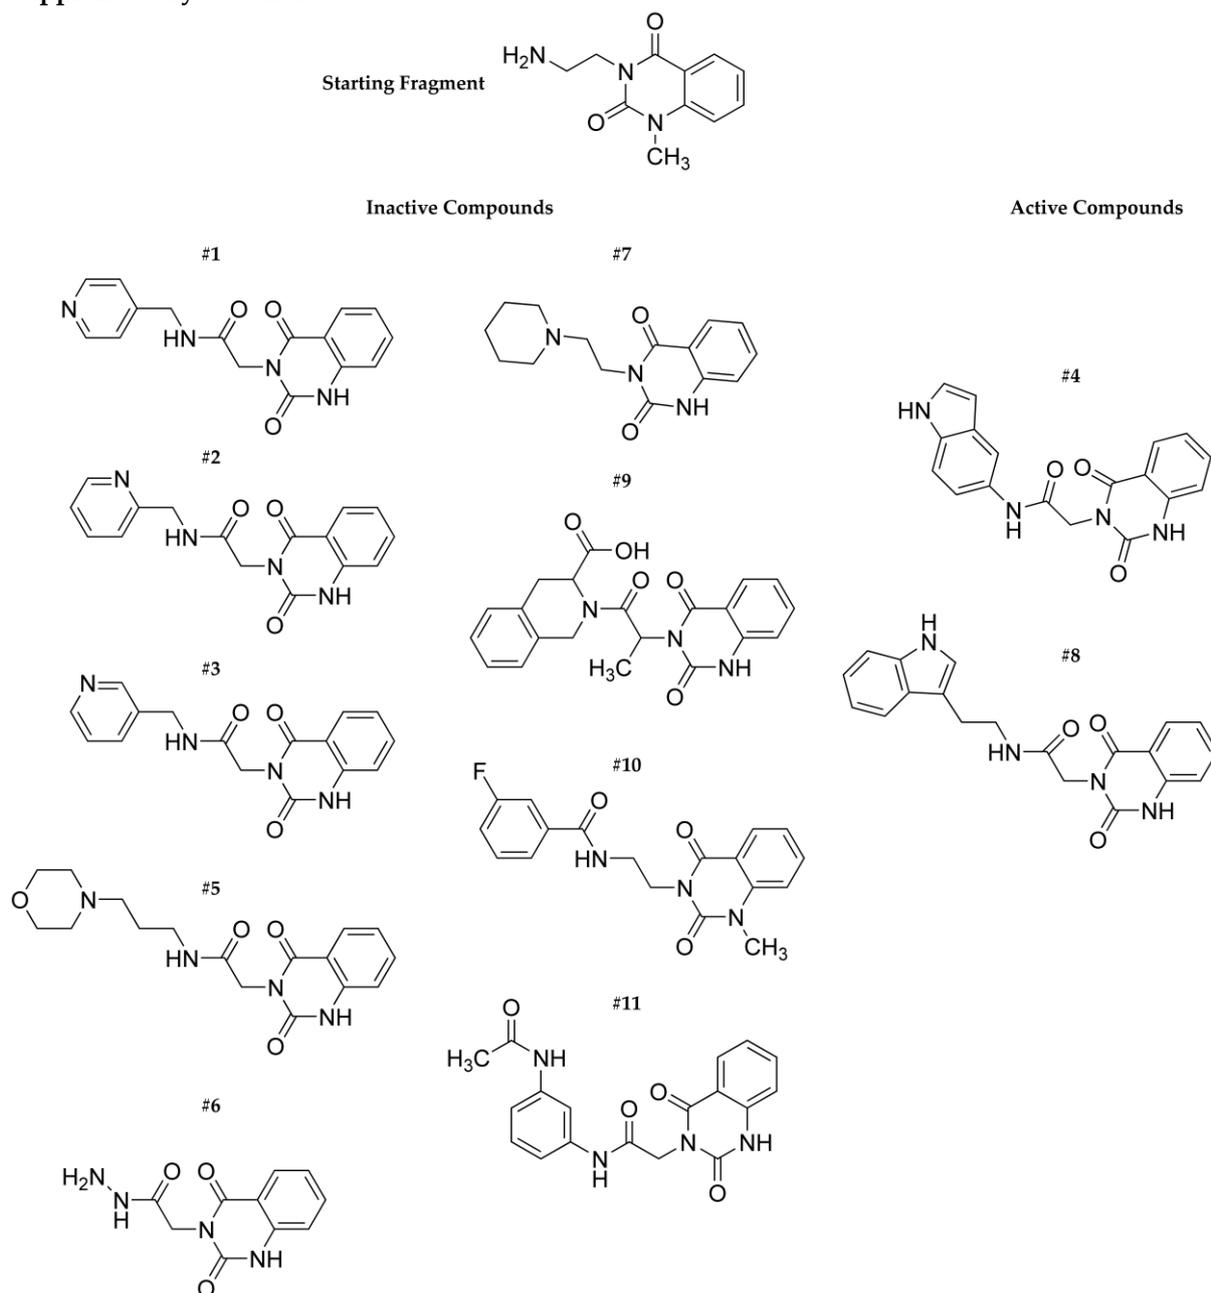

Figure S1. Scaffold and compounds selected by similarity-based search in the ChemBridge screening compounds database. Compounds were classified as active if they showed significant inhibition of *LmUSP* activity at 500 μ M. The compounds can be identified by their respective ChemBridge ID numbers: #1 (CID 9245967), #2 (CID 9214059), #3 (CID 9252929), #4 (CID 9207718), #5 (CID 9231249), #6 (CID 9270353), #7 (CID 9195974), #8 (CID 9206277), #9 (CID 9280745), #10 (CID 9329111), #11 (CID 9212920).

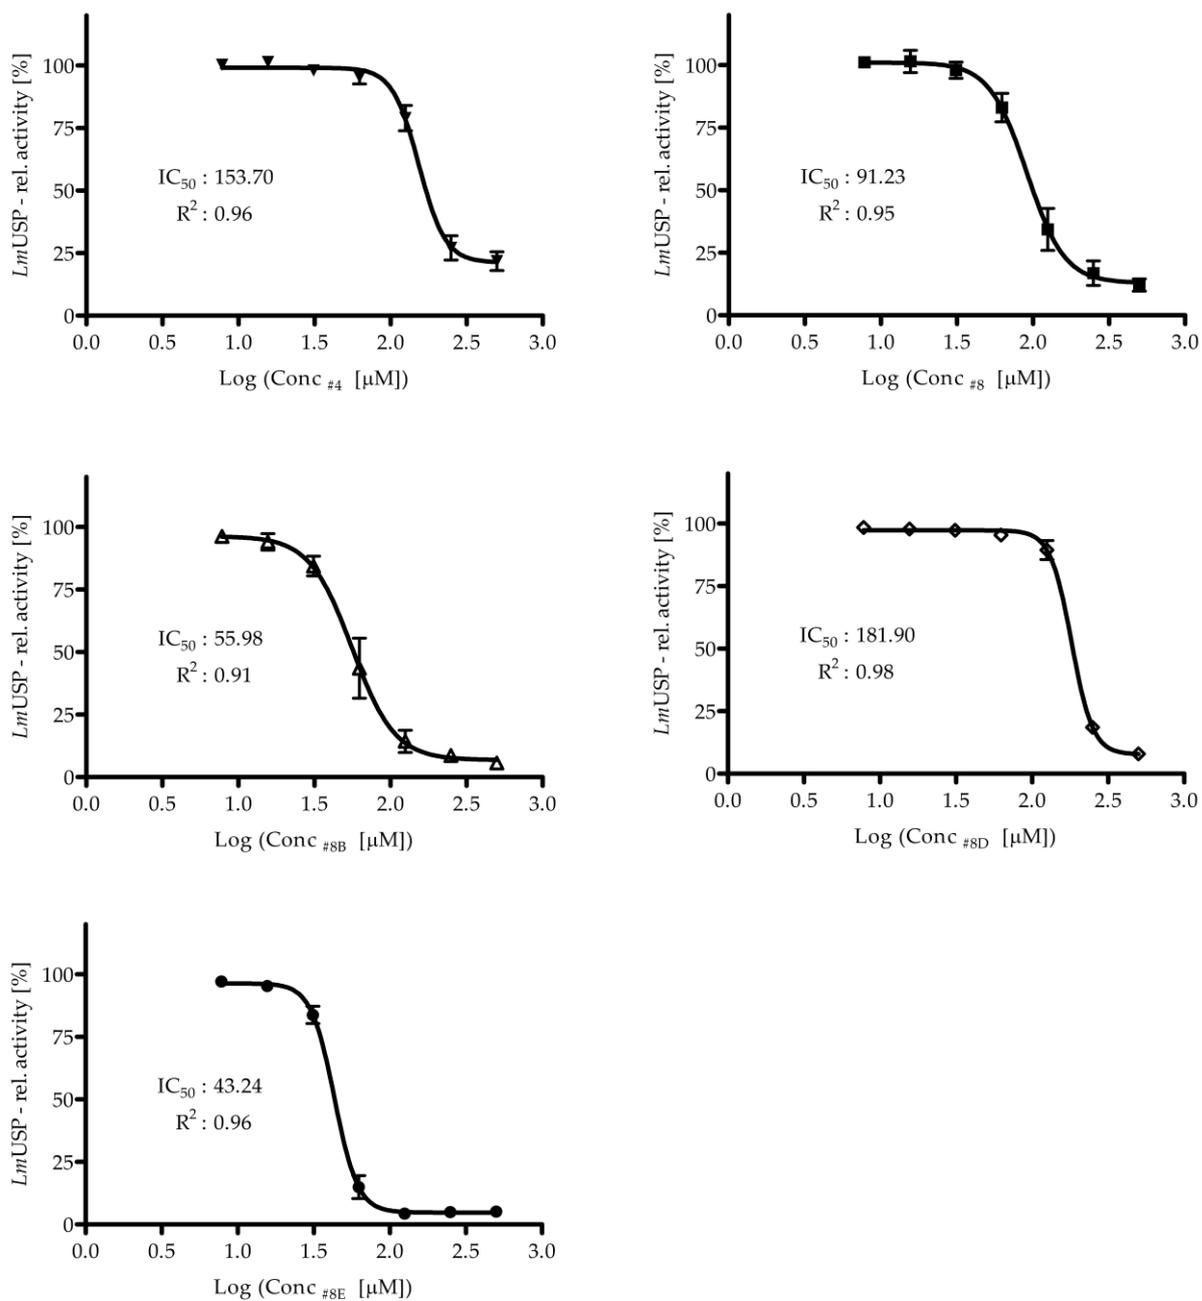

Figure S2. Nonlinear regression – sigmoidal dose-response curve for IC_{50} determination of compounds #4, #8, #8B, #8D and #8E bound to *LmUSP*. Error bars are given as standard deviations from at least 2 independent experiments.

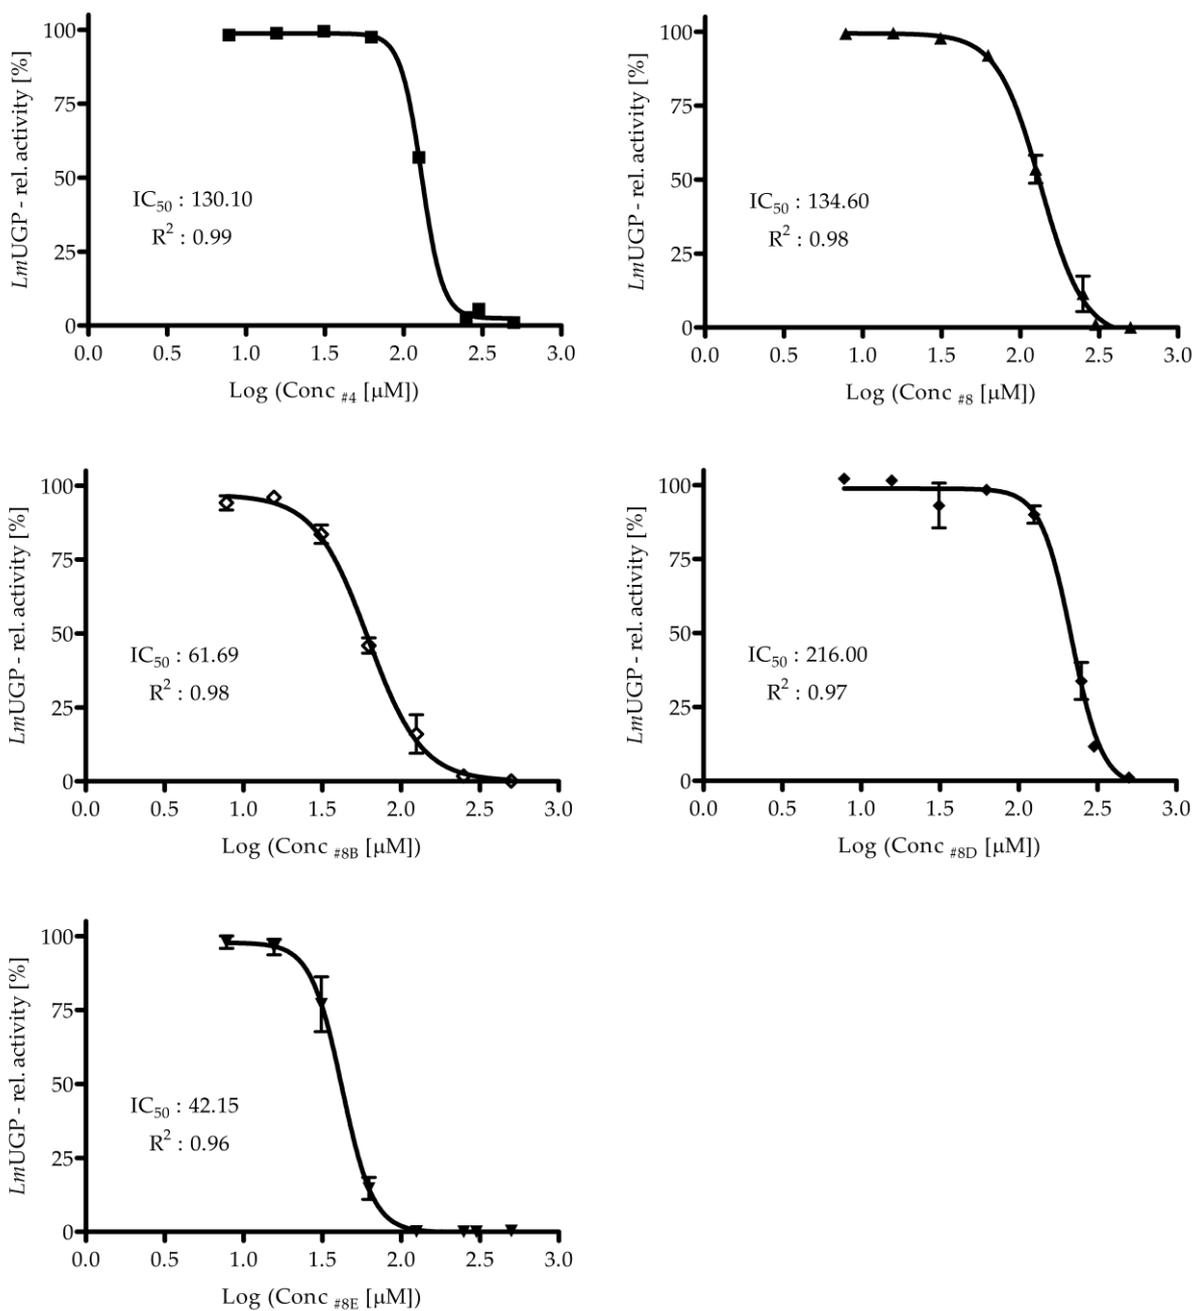

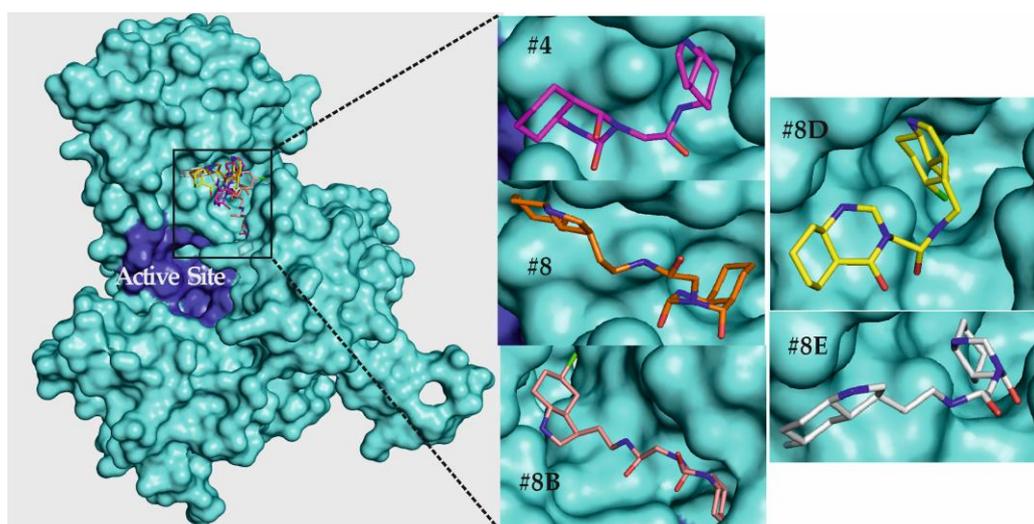

Figure S3. Nonlinear regression – sigmoidal dose-response curve for IC_{50} determination of compounds #4, #8, #8B, #8D and #8E bound to *LmUGP*. Error bars are given as standard deviations from at least 2 independent experiments.

| Compound | GLIDE -XP Docking Score (kcal/mol) |
|----------|------------------------------------|
| #4 | -9.647 |
| #8 | -8.186 |
| #8B | -10.638 |
| #8D | -7.428 |
| #8E | -10.099 |

Figure S4. Surface representation of *LmUGP* in cyan with the active site colored in blue. The docked ligands (#4, #8, #8B, #8D, and #8E) at the allosteric site are shown in stick representation. The table shows the corresponding docking scores.

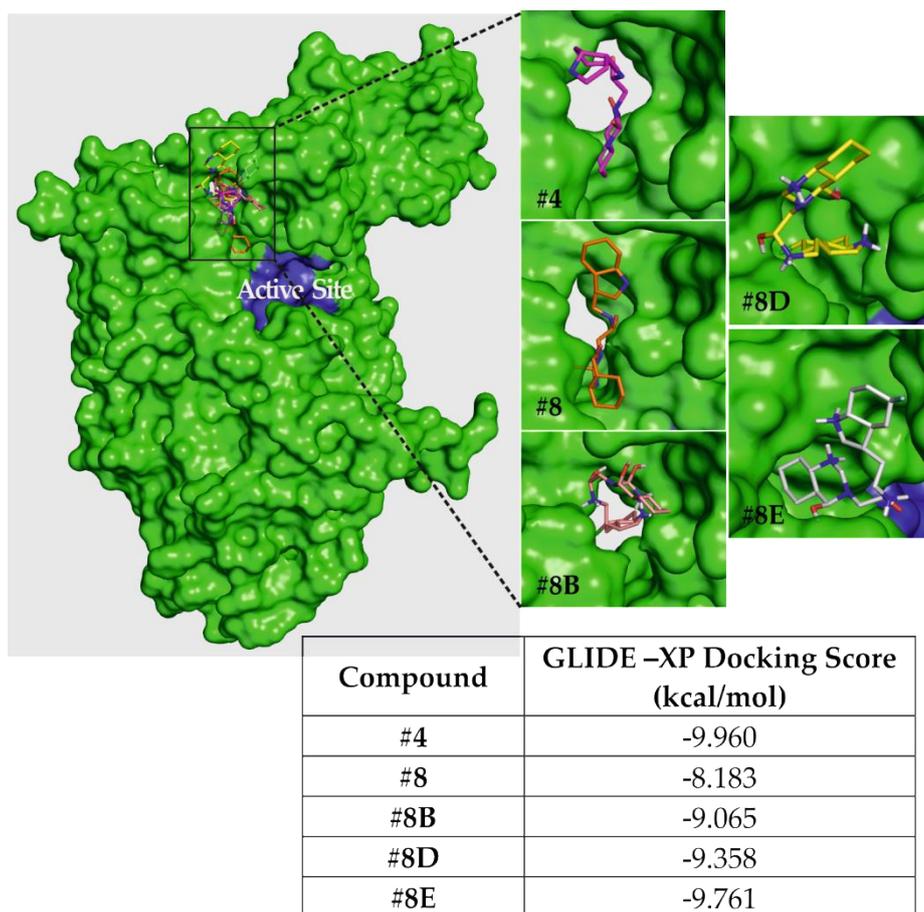

Figure S5. Surface representation of *LmUSP* in green with the active site colored in blue. The docked ligands (#4, #8, #8B, #8D, and #8E) at site 1 are shown in stick representation. The table shows the corresponding docking scores.

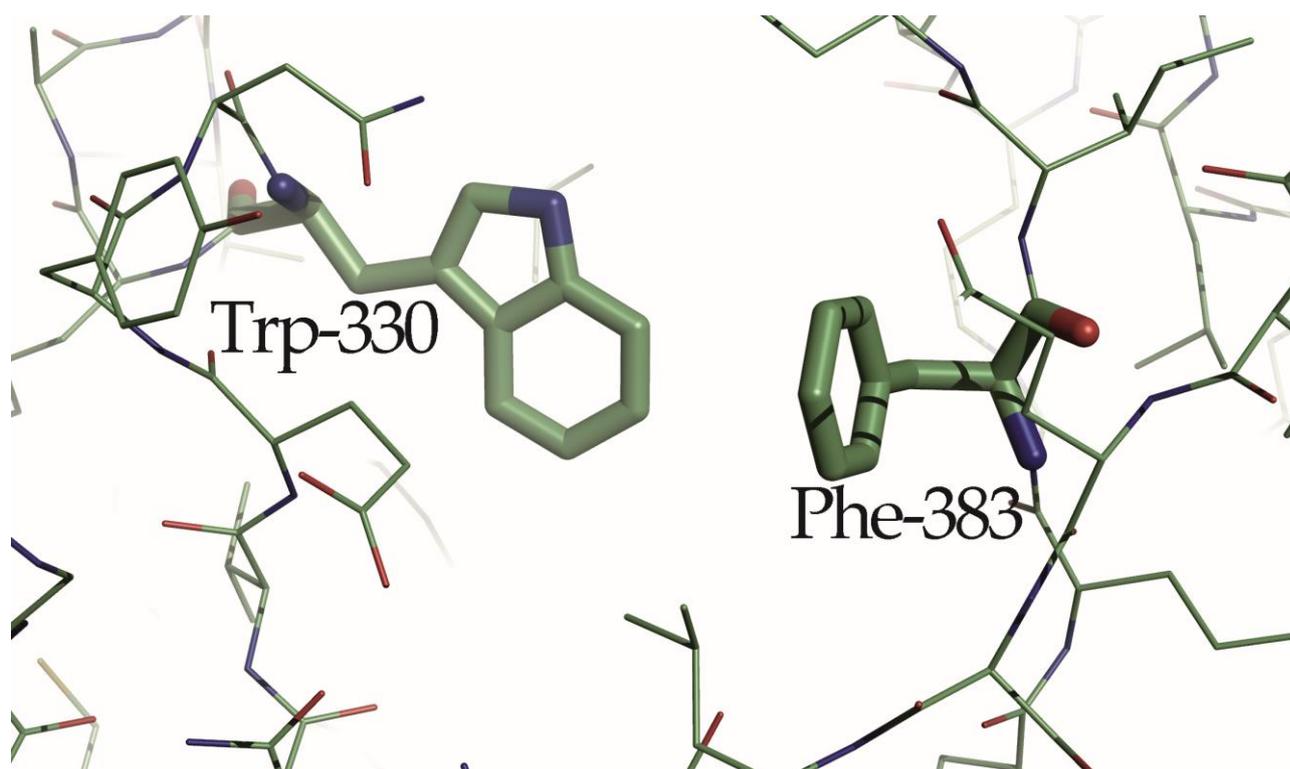

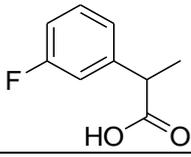

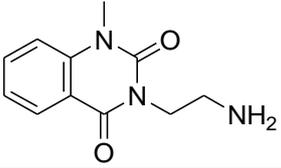

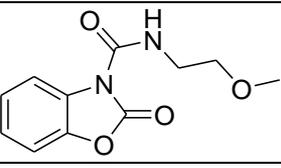

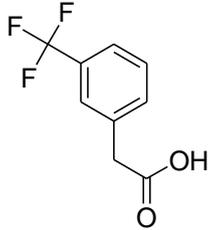

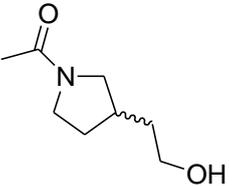

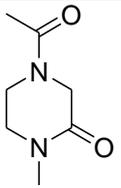

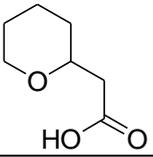

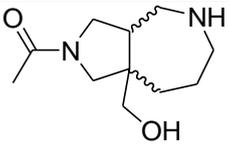

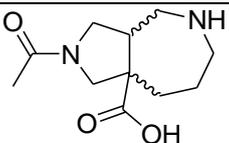

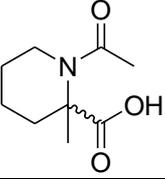

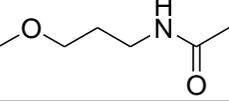

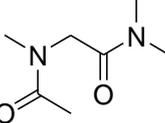

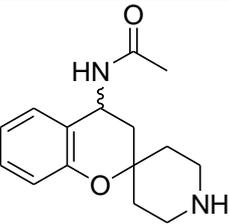

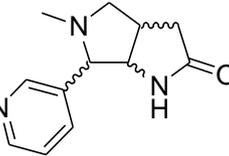

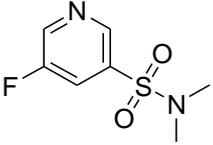

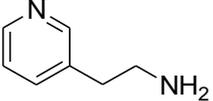

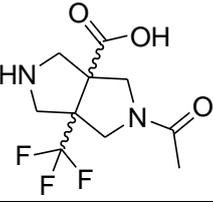

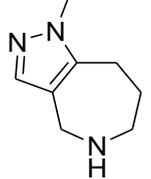

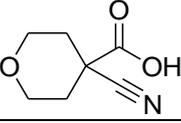

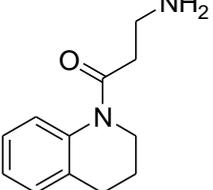

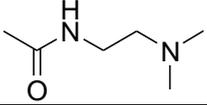

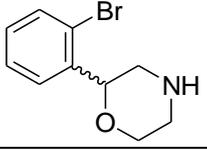

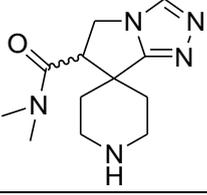

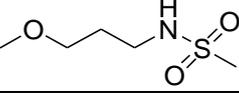

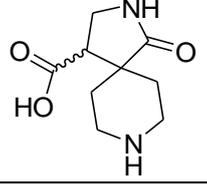

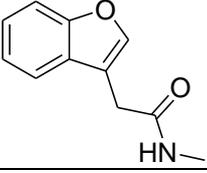

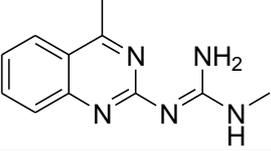

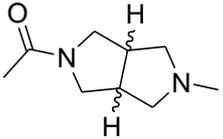

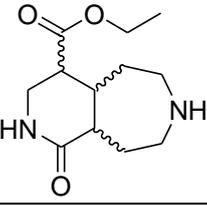

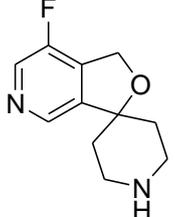

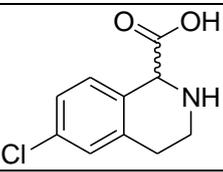

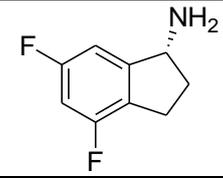

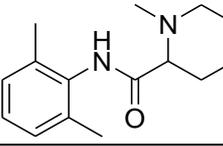

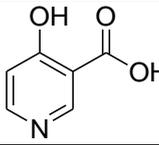

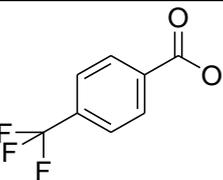

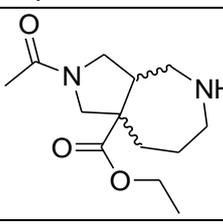

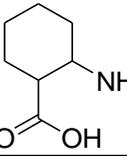

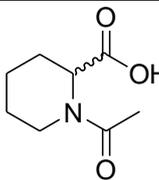

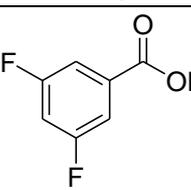

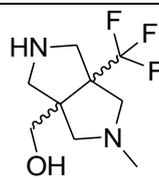

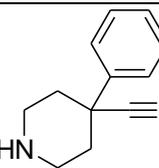

Figure S6. Phenylalanine 383 (Wild type) and Tryptophan 330 (introduced by point mutation) hypothesized to favor catalytically active conformation via π - interaction. Mutation was introduced using the 'Mutagenesis' feature in Pymol.

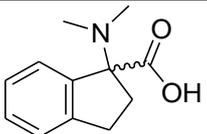

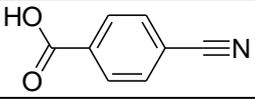

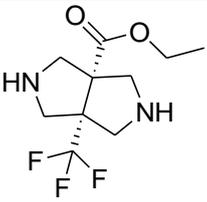

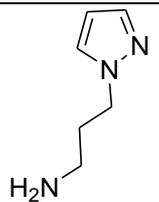

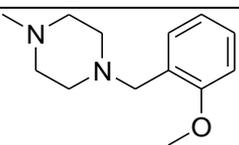

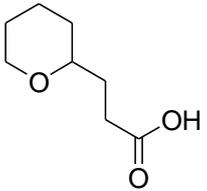

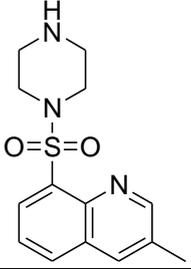

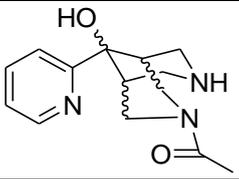

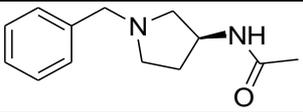

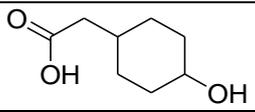

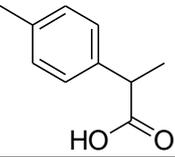

Table S1. Structure and estimated K_D values of hits from the BLI based fragment binding study.

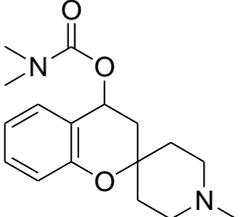

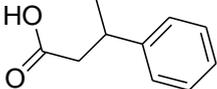

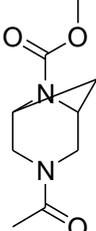

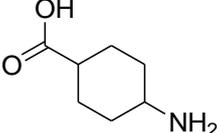

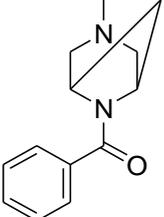

| DDU Fragment ID | Structure | Estimated K_D (μM) |
