

Figure S2. Relative expressions of miRNAs (A: hsa-miR-381-3p, B: hsa-miR-543, C: hsa-miR-144-3p, and D: hsa-miR-30b-5p) among three groups using quantitative real-time PCR assays.

One way ANOVA followed by Tukey's method was used.

Bars represent mean \pm SD of each periodontitis groups.

The relative expressions of miRNAs were normalized by log10 transformation for the analysis.
