Equation S1. SABRE amplification Calculation

The signal enhancement (ϵ) were determined by calculating a ratio of the integrals of the reference sample(Ref) and hyperpolarized sample(HP). Here, S_{HP} and S_{Ref} are integral of the signal for the HP and Ref samples, respectively, and C_{HP} and C_{Ref} are the integral of the HP and the Ref solvent peaks of the sample, respectively.

$$\epsilon = \frac{S_{HP}}{S_{Ref}} \cdot \frac{C_{Ref}}{C_{HP}}$$
