

Figure S1. Giemsa staining of HTB-9 cell monolayers incubated with 1.5% D-mannose for 24 h. Representative images of two independent experiments are shown. Scale bar, 10 μm . Images were recorded with the 40X objective using a Leica DM5000B microscope and processed using the Leica Application Suite 2.7.0.R1 software (Leica). Scale bar: 10 μm .
