Photosensitizer Experiments

Compound **22** (2.3 mg) was dissolved in toluene- d_8 (600 μ L) in an NMR tube; about the same weight of the Michler's ketone sensitizer was then added. The sample was then irradiated with a 300 nm LED light source from Thorlabs overnight (M300L4, minimum power output 32 mW). The NMR spectrum of the pure sample with Michler's ketone sensitizer before irradiation and after irradiation overnight was taken (Supplementary Figure 50).

Supplementary Figure 50. NMR spectra of **22** together with Michler's ketone in toluene- d_8 before (top) and after (bottom) irradiation.

Compound **23** (2.6 mg) was dissolved in toluene- d_8 (600 μ L) in an NMR tube; about the same weight of the Michler's ketone sensitizer was then added. The sample was then irradiated with a 300 nm LED light source from Thorlabs overnight (M300L4, minimum power output 32 mW). The NMR spectrum of the pure sample with Michler's ketone sensitizer before irradiation and after irradiation overnight was taken (Supplementary Figure 51).
