S. tritici

S. tritici

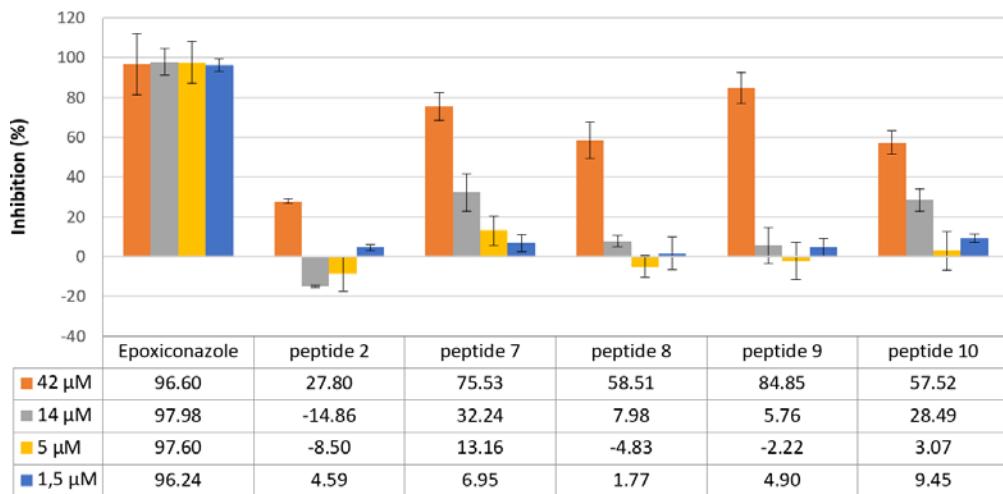

Figure S11. Inhibitory activity of the compounds against *Septoria tritici* pathogen.

Note: Inhibition values slightly above 100% as in peptide 3 could be the result of interference due to aggregation of the compound at relative high concentrations, resulting in low transmittance of the sample in the initial measurement (t_0).

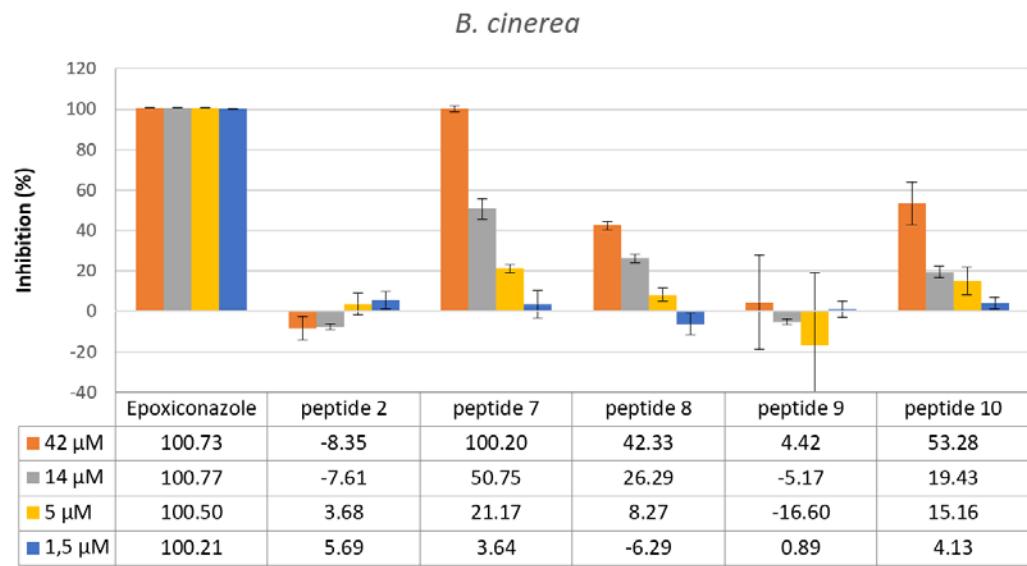

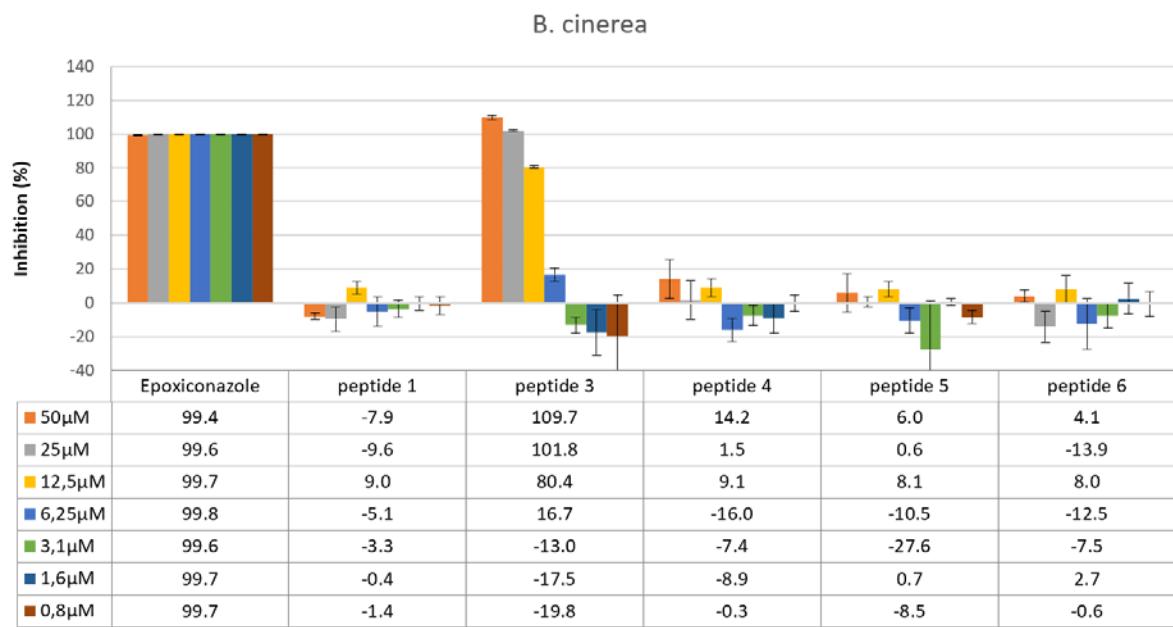

Figure S12. Inhibitory activity of the compounds against *Botrytis cinerea* pathogen

Note: Inhibition values slightly above 100% as in peptide 3 could be the result of interference due to aggregation of the compound at relative high concentrations, resulting in low transmittance of the sample in the initial measurement (t_0).

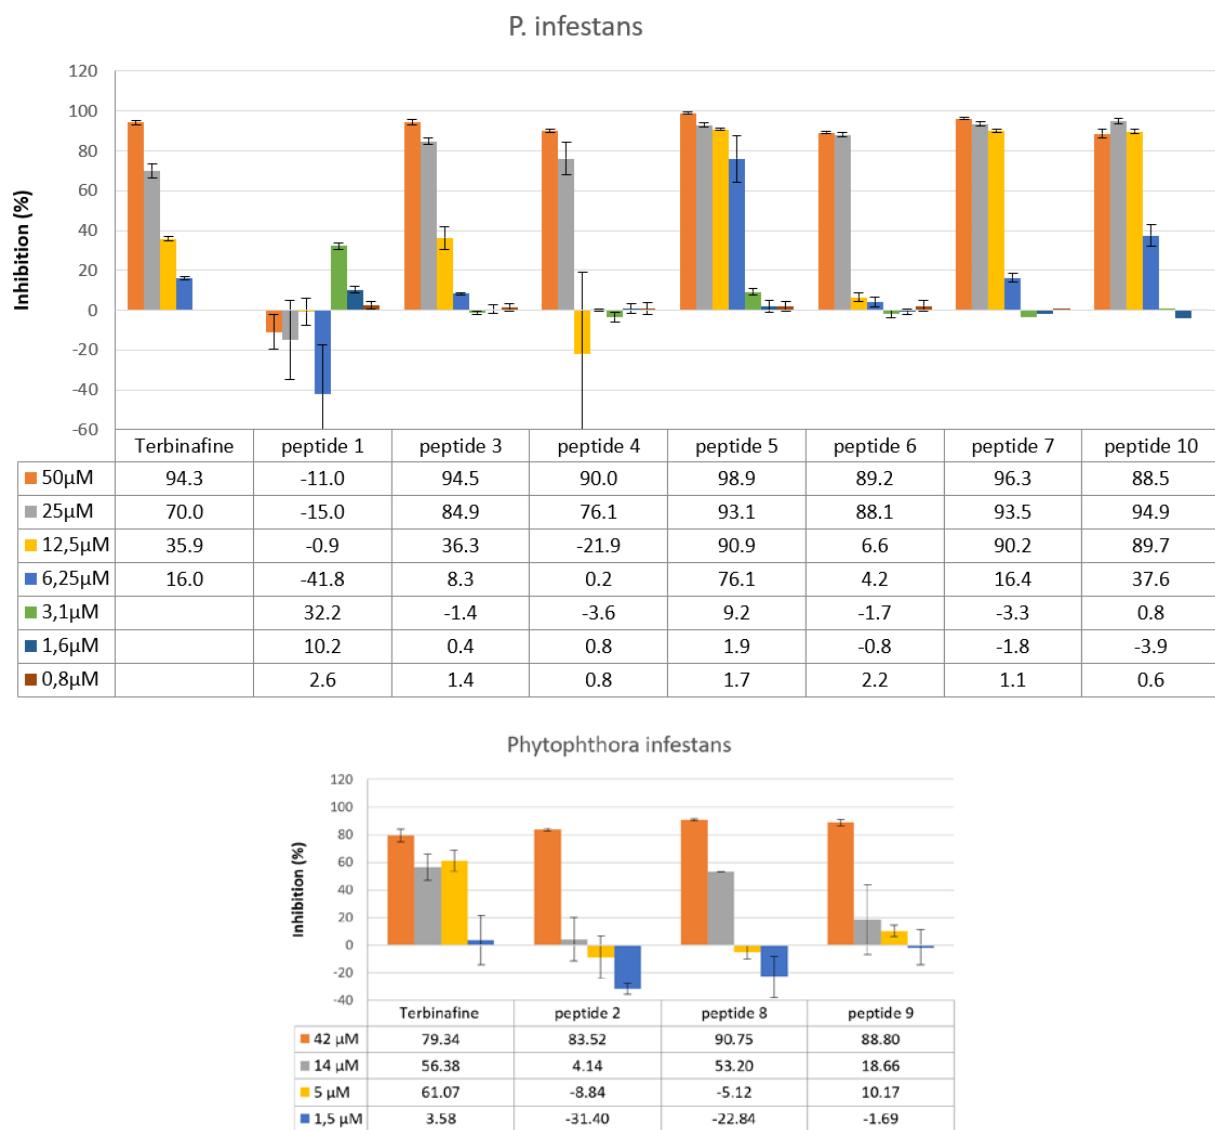

Figure S13. Inhibitory activity of the compounds against *Phytophthora infestans* pathogen

Synthesis of Isocyanides

The non-commercial *n*-dodecyl isocyanide and *n*-octadecyl isocyanide were synthesized according to the protocols described in previous reports.¹
