Table S1. Primary screening of the Inhibitory effect of compounds **2**, **3** and **7** on TPA-induced inflammation in a mouse model.

Muestra	Edema (mg)	Inhibición (%)	DI₅₀ (μmol/oreja)
Control (ethanol)	13.20±0.31	-	-
6-β-hidroxy-trans comunico (2)	14.27±1.11	9.51 ± 7.08	ND
Trans comunic acid (3)	10.33±1.03	21.72 ± 7.84	ND
β-eudesmol (7)	12.00±2.01	9.09 ± 15.25	ND

Effects on ear edema of female mice CD-1; Doses (1.0 μmol ear⁻¹); each value represents the mean of three animals ± SEM; The results were analyzed with the Student's t test; The values at p ≤ 0.05 (*) and p ≤ 0.01 (**) were considered as significant differences with respect to the control group. ND = the compound was considered not active and the DI₅₀ was no determined.

Table S2. Primary screening of inhibition of mammalian α -glucosidase activity for compounds **1** and **2**.

Compound	Concentration (μ M)	Inhibition (%)	IC ₅₀
1	1	2.91	ND
	10	3.46	
	100	2.48	
2	1	0.92	ND
	10	2.57	
	100	2.73	
Acarbose	1	25.84**	
	10	44.12**	
	100	56.88**	

Each value represents the mean of three independent experiments \pm SEM; The data were analyzed by ANOVA followed by Dunnet post hoc test for comparison with control group. The values at $p \leq 0.05$ (*) and $p \leq 0.01$ (**) were considered as significant differences with respect to the control group. ND = the compound was considered not active and the IC₅₀ was no determined.
