The thermal stability was characterized by thermal gravimetric analysis (TGA) in air, shown in Fig. S1. The content of MnO₂ in MnO₂/rGO and MnO₂/rGO/CNTs are about 49.6 wt% and 50.8 wt%, respectively.

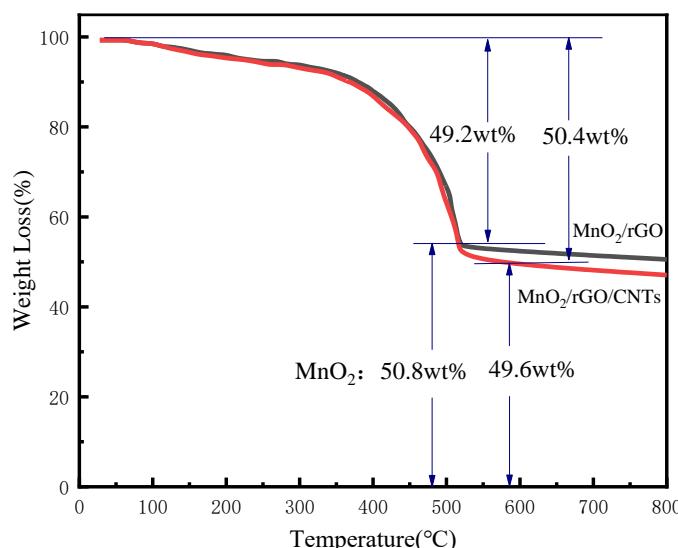

Figure S1. TGA curves of MnO₂/rGO and MnO₂/rGO/CNTs.

Table S1. Electrochemical properties of the reported MnO₂-containing composite hosts for Li-S batteries.
