## 2. Spectra of reagents

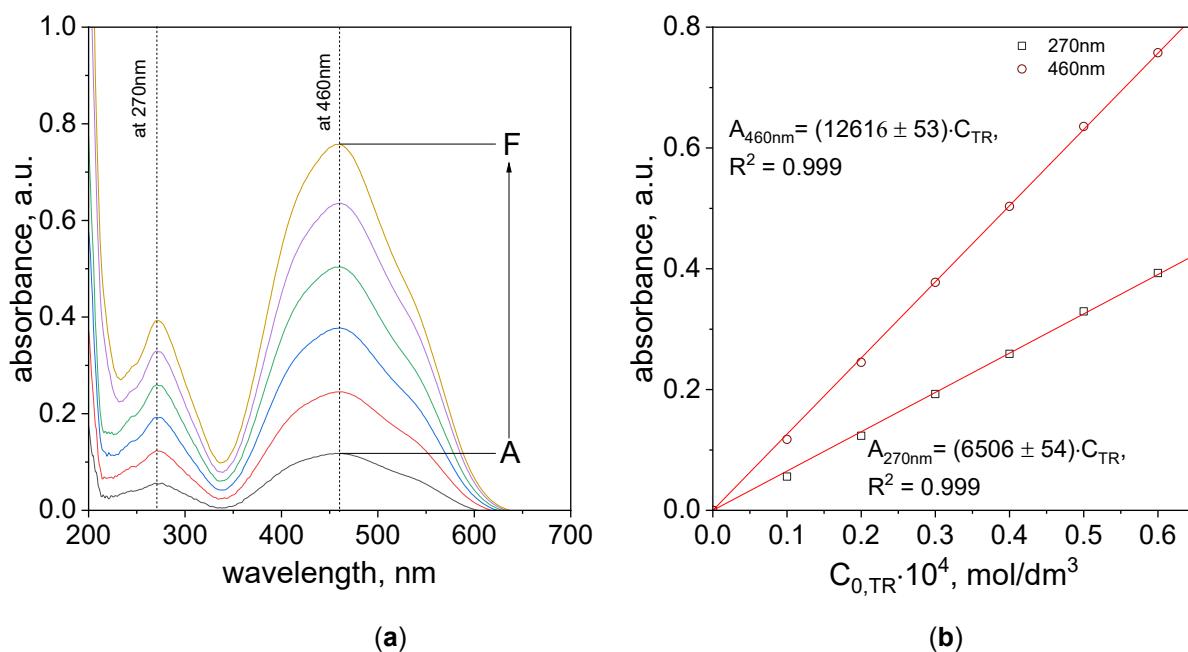

Before synthesizing metalorganic complexes, the proper reagents i.e. solution of tropaeolin OO (TR) and Pd(II) ions in H<sub>2</sub>O and B-R buffer (pH = 2.09 – 6.09) as solvent were spectrophotometrically analyzed. Obtained spectra for an aqueous solution of TR and determining molar coefficient ( $\epsilon$ ) were shown in Fig. S1 – Fig. S6.

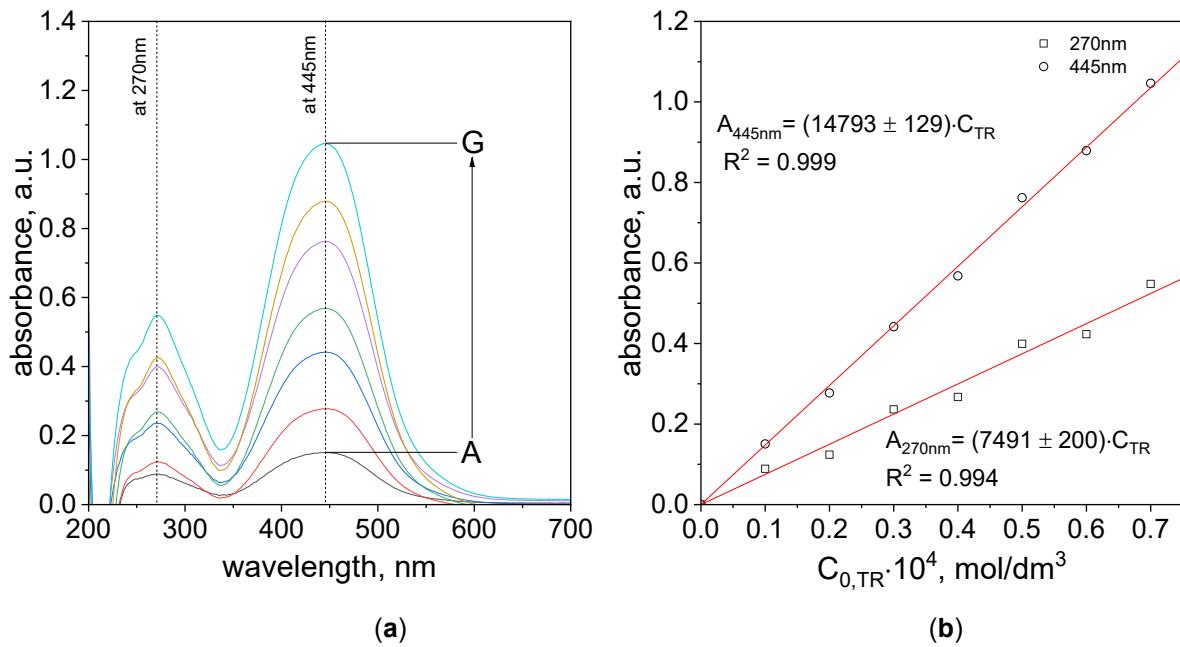

**Figure S1.** The spectra UV-Vis of tropaeolin OO aqueous solutions (H<sub>2</sub>O as solvent) with different initial concentrations: A – 6.25·10<sup>-6</sup> mol/dm<sup>3</sup>; B – 1.25·10<sup>-5</sup> mol/dm<sup>3</sup>; C – 1.87·10<sup>-5</sup> mol/dm<sup>3</sup>; D – 2.5·10<sup>-5</sup> mol/dm<sup>3</sup>; E – 3.125·10<sup>-5</sup> mol/dm<sup>3</sup>; F – 5·10<sup>-5</sup> mol/dm<sup>3</sup> (a), dependency of absorbance vs. initial concentrations of tropaeolin OO in the range 6.25·10<sup>-6</sup> mol/dm<sup>3</sup> to 5·10<sup>-5</sup> mol/dm<sup>3</sup>, wavelength: 272 nm and 445 nm, (b). Conditions: T = 20°C, path length 1 cm.

The aqueous solutions of TR have a characteristic UV-Vis spectrum with two maximum localized at 272 nm and 445 nm (Fig. S1a). According to Lambert-Beer law, the intensity of the spectrum is directly proportional to the concentration of dye (Fig. S1b). Based on these results (absorbance vs. concentration, Fig. S1b), the values of molar coefficients from the slope of the fitted curve to experimental data were determined and equal  $\epsilon$  (272 nm) =  $11\ 458 \pm 130\ M^{-1}\cdot cm^{-1}$  and  $\epsilon$  (445 nm) =  $22\ 350 \pm 59\ M^{-1}\cdot cm^{-1}$ .

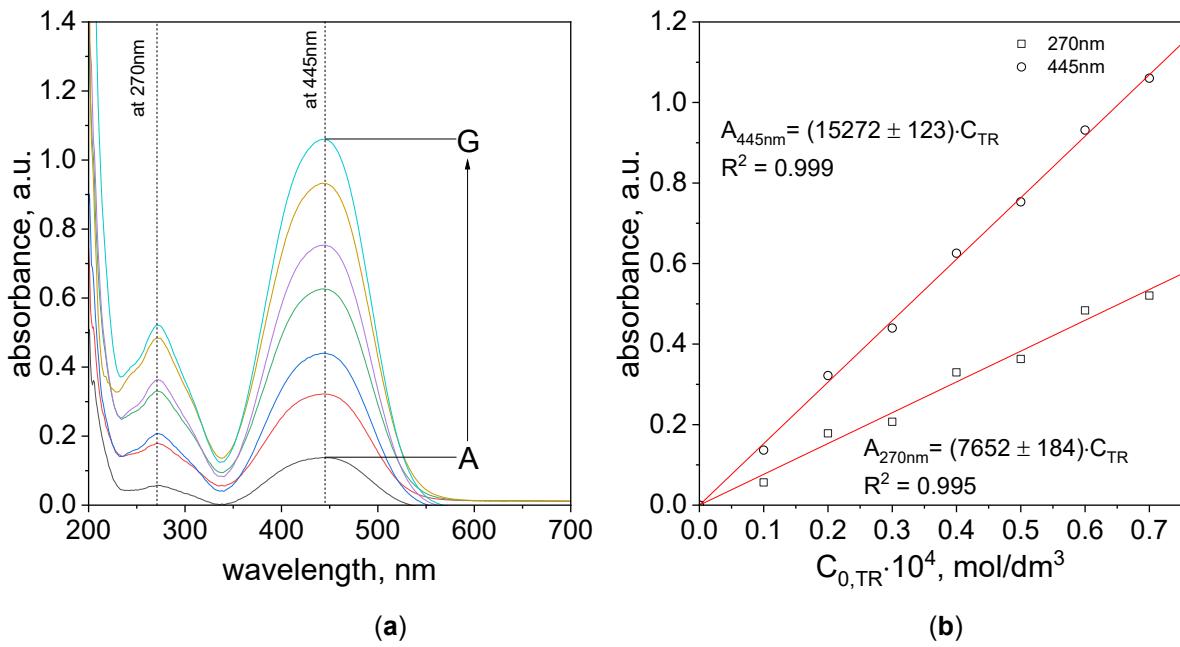

Analogous spectra were registered for TR in the B-R buffer solution. The obtained spectra and graphically determining values of molar coefficient at different pH of the solution were shown in Fig. S2 – S6.

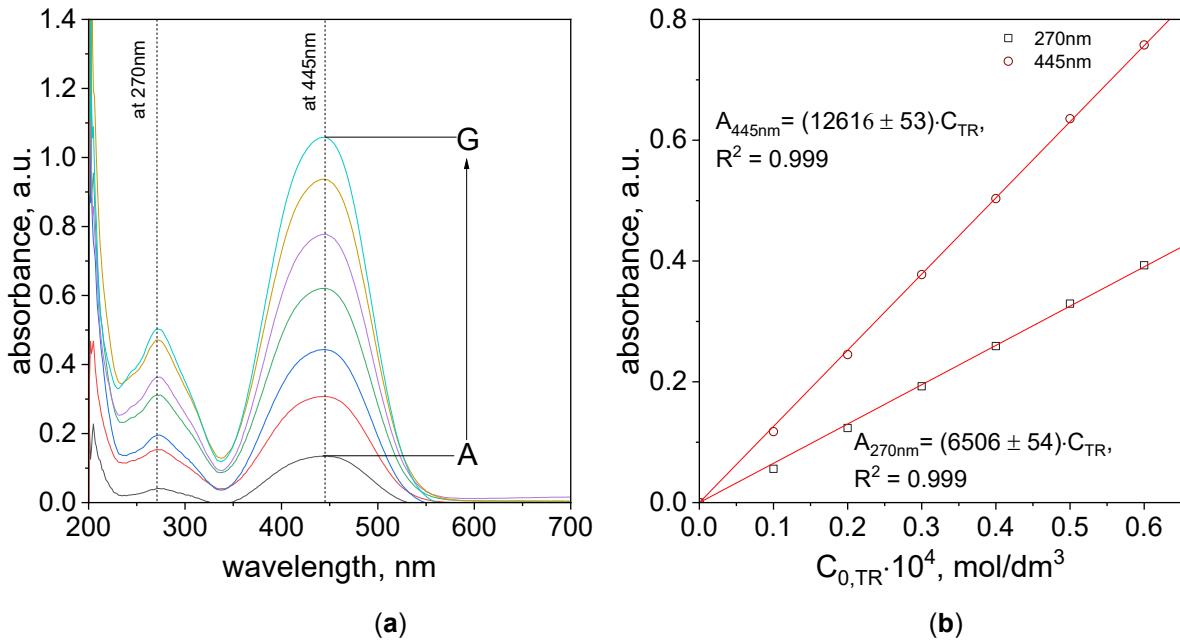

**Figure S2.** The spectra UV-Vis of tropaeolin OO aqueous solutions (B – R buffer as solvent) at different initial concentrations: A –  $6.25 \cdot 10^{-6}\ mol/dm^3$ ; B –  $1.25 \cdot 10^{-5}\ mol/dm^3$ ; C –  $1.87 \cdot 10^{-5}\ mol/dm^3$ ; D –  $2.5 \cdot 10^{-5}\ mol/dm^3$ ; E –  $3.125 \cdot 10^{-5}\ mol/dm^3$ ; F –  $5 \cdot 10^{-5}\ mol/dm^3$  (a), dependency of absorbance vs. initial concentrations of tropaeolin OO in the range  $6.25 \cdot 10^{-6}\ mol/dm^3$  to  $5 \cdot 10^{-5}\ mol/dm^3$ , wavelength: 270 nm and 460 nm, (b). Conditions: T = 20°C, path length 1 cm, pH= 2.09.

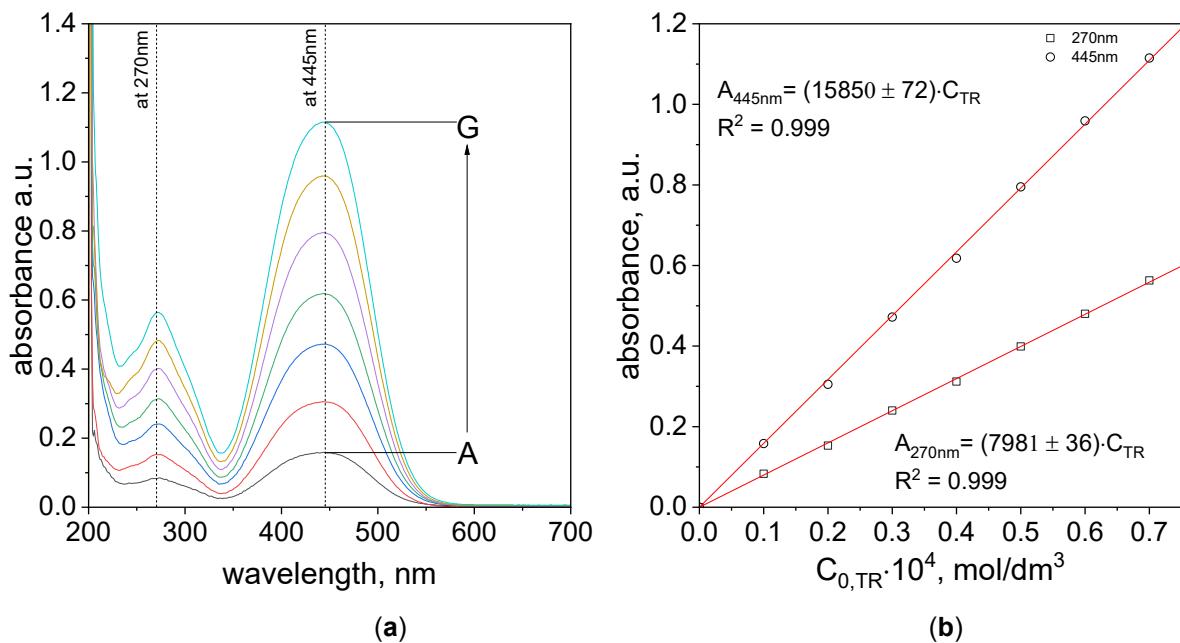

**Figure S3.** The spectra UV-Vis of tropaeolin OO aqueous solutions (B – R buffer as solvent) at different initial concentrations: A –  $6.25 \cdot 10^{-6}$  mol/dm<sup>3</sup>; B –  $1.25 \cdot 10^{-5}$  mol/dm<sup>3</sup>; C –  $1.87 \cdot 10^{-5}$  mol/dm<sup>3</sup>; D –  $2.5 \cdot 10^{-5}$  mol/dm<sup>3</sup>; E –  $3.125 \cdot 10^{-5}$  mol/dm<sup>3</sup>; F –  $5 \cdot 10^{-5}$  mol/dm<sup>3</sup> (a), dependency of absorbance vs. initial concentrations of tropaeolin OO in the range  $6.25 \cdot 10^{-6}$  mol/dm<sup>3</sup> to  $5 \cdot 10^{-5}$  mol/dm<sup>3</sup>, wavelength: 270 nm and 445 nm, (b). Conditions: T = 20°C, path length 1 cm, pH= 2.87

**Figure S4.** The spectra UV-Vis of tropaeolin OO aqueous solutions (B – R buffer as solvent) at different initial concentrations: A –  $6.25 \cdot 10^{-6}$  mol/dm<sup>3</sup>; B –  $1.25 \cdot 10^{-5}$  mol/dm<sup>3</sup>; C –  $1.87 \cdot 10^{-5}$  mol/dm<sup>3</sup>; D –  $2.5 \cdot 10^{-5}$  mol/dm<sup>3</sup>; E –  $3.125 \cdot 10^{-5}$  mol/dm<sup>3</sup>; F –  $5 \cdot 10^{-5}$  mol/dm<sup>3</sup> (a), dependency of absorbance vs. initial concentrations of tropaeolin OO in the range  $6.25 \cdot 10^{-6}$  mol/dm<sup>3</sup> to  $5 \cdot 10^{-5}$  mol/dm<sup>3</sup>, wavelength: 270 nm and 460 nm, (b). Conditions: T = 20°C, path length 1 cm, pH= 4.10

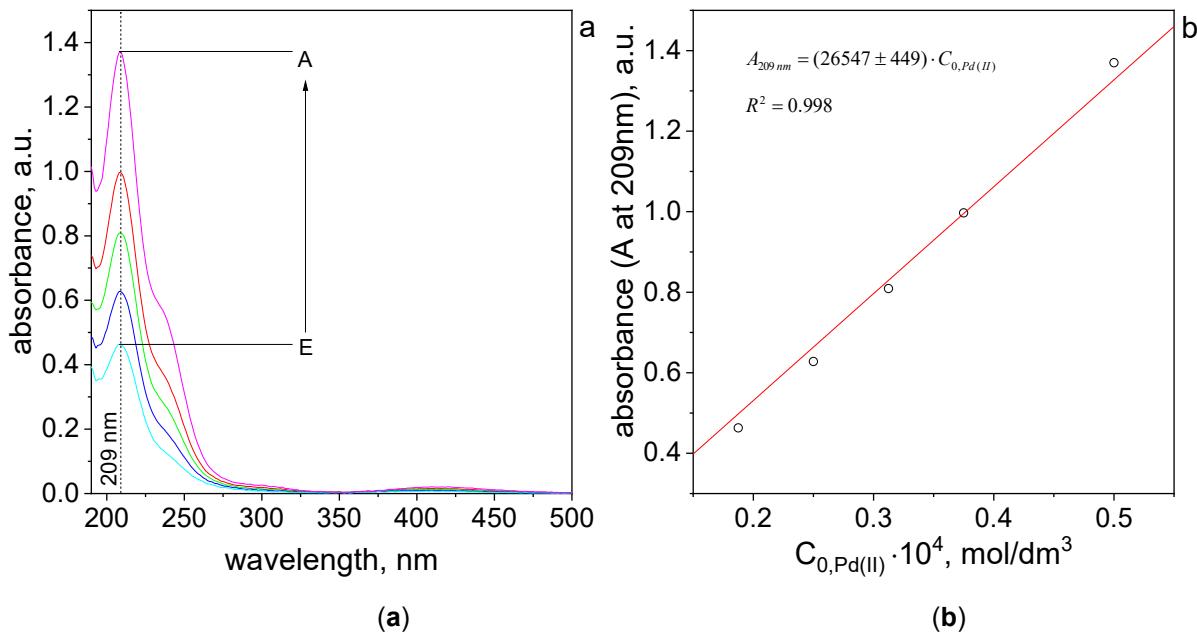

**Figure S5.** The spectra UV-Vis of tropaeolin OO aqueous solutions (B – R buffer as solvent) at different initial concentrations: A –  $6.25 \cdot 10^{-6}$  mol/dm<sup>3</sup>; B –  $1.25 \cdot 10^{-5}$  mol/dm<sup>3</sup>; C –  $1.87 \cdot 10^{-5}$  mol/dm<sup>3</sup>; D –  $2.5 \cdot 10^{-5}$  mol/dm<sup>3</sup>; E –  $3.125 \cdot 10^{-5}$  mol/dm<sup>3</sup>; F –  $5 \cdot 10^{-5}$  mol/dm<sup>3</sup> (a), dependency of absorbance vs. initial concentrations of tropaeolin OO in the range  $6.25 \cdot 10^{-6}$  mol/dm<sup>3</sup> to  $5 \cdot 10^{-5}$  mol/dm<sup>3</sup>, wavelength: 270 nm and 445 nm, (b). Conditions: T = 20°C, path length 1 cm, pH= 5.02.

**Figure S6.** The spectra UV-Vis of tropaeolin OO aqueous solutions (B – R buffer as solvent) at different initial concentrations: A –  $6.25 \cdot 10^{-6}$  mol/dm<sup>3</sup>; B –  $1.25 \cdot 10^{-5}$  mol/dm<sup>3</sup>; C –  $1.87 \cdot 10^{-5}$  mol/dm<sup>3</sup>; D –  $2.5 \cdot 10^{-5}$  mol/dm<sup>3</sup>; E –  $3.125 \cdot 10^{-5}$  mol/dm<sup>3</sup>; F –  $5 \cdot 10^{-5}$  mol/dm<sup>3</sup> (a), dependency of absorbance vs. initial concentrations of tropaeolin OO in the range  $6.25 \cdot 10^{-6}$  mol/dm<sup>3</sup> to  $5 \cdot 10^{-5}$  mol/dm<sup>3</sup>, wavelength: 270 nm and 445 nm, (b). Conditions: T = 20°C, path length 1 cm, pH= 6.0

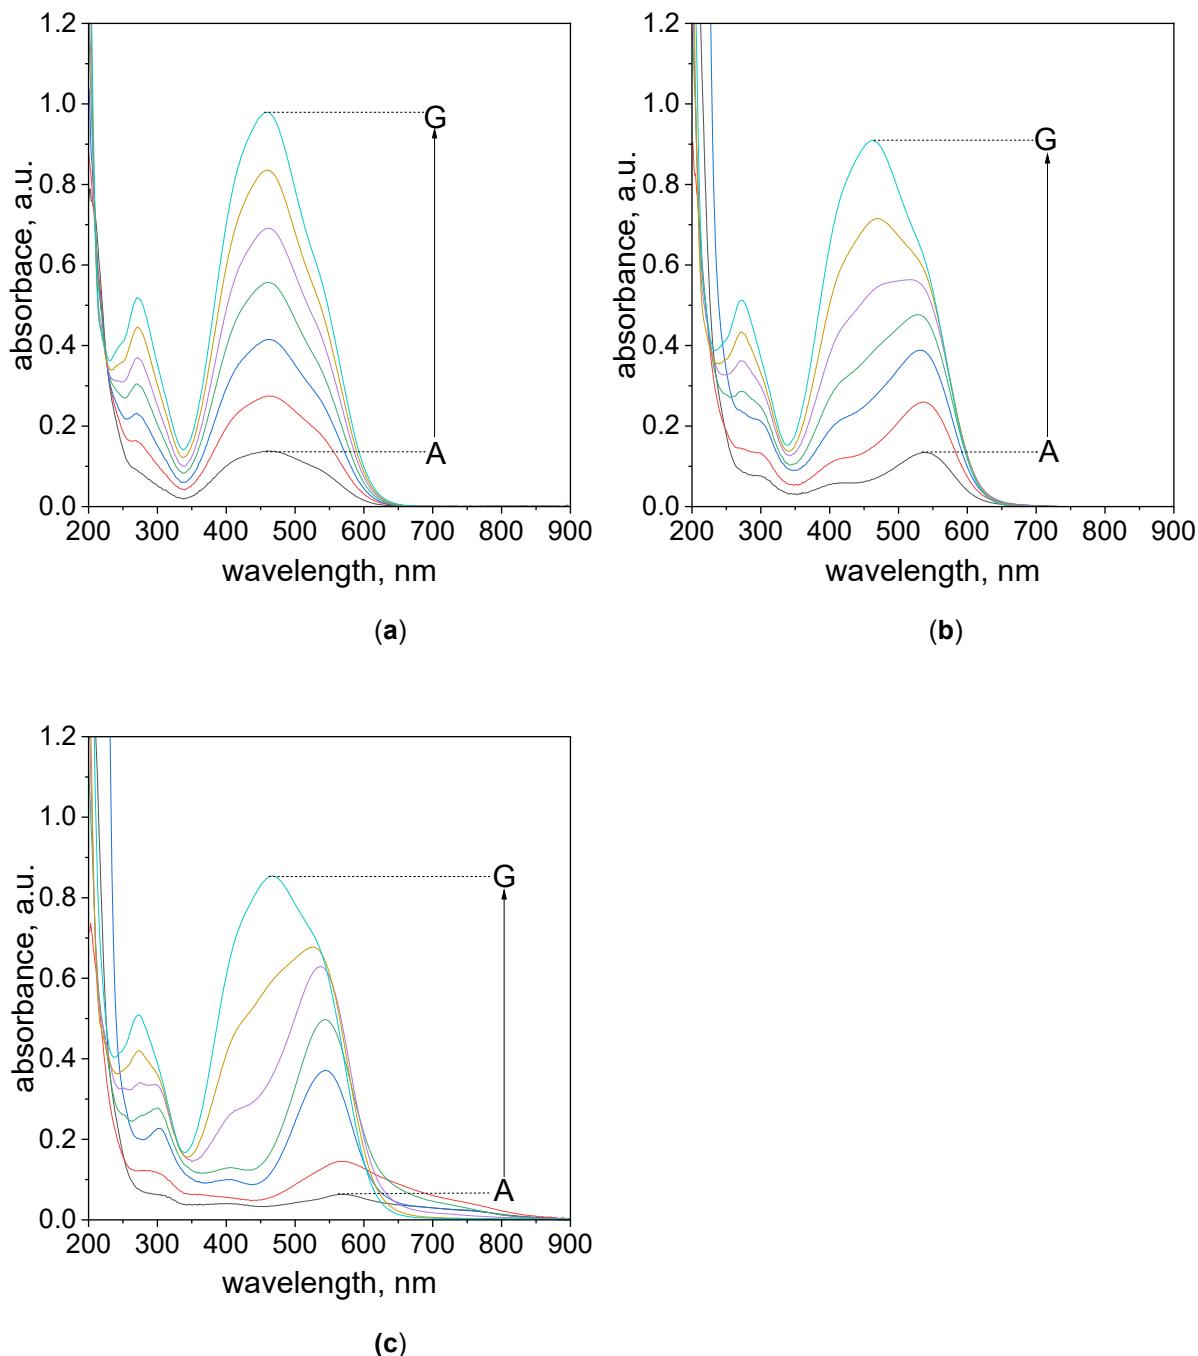

The characteristic UV-Vis spectra and graphical determined value of molar coefficient were registered for Pd(II) aqueous solution and shown in Fig. S7.

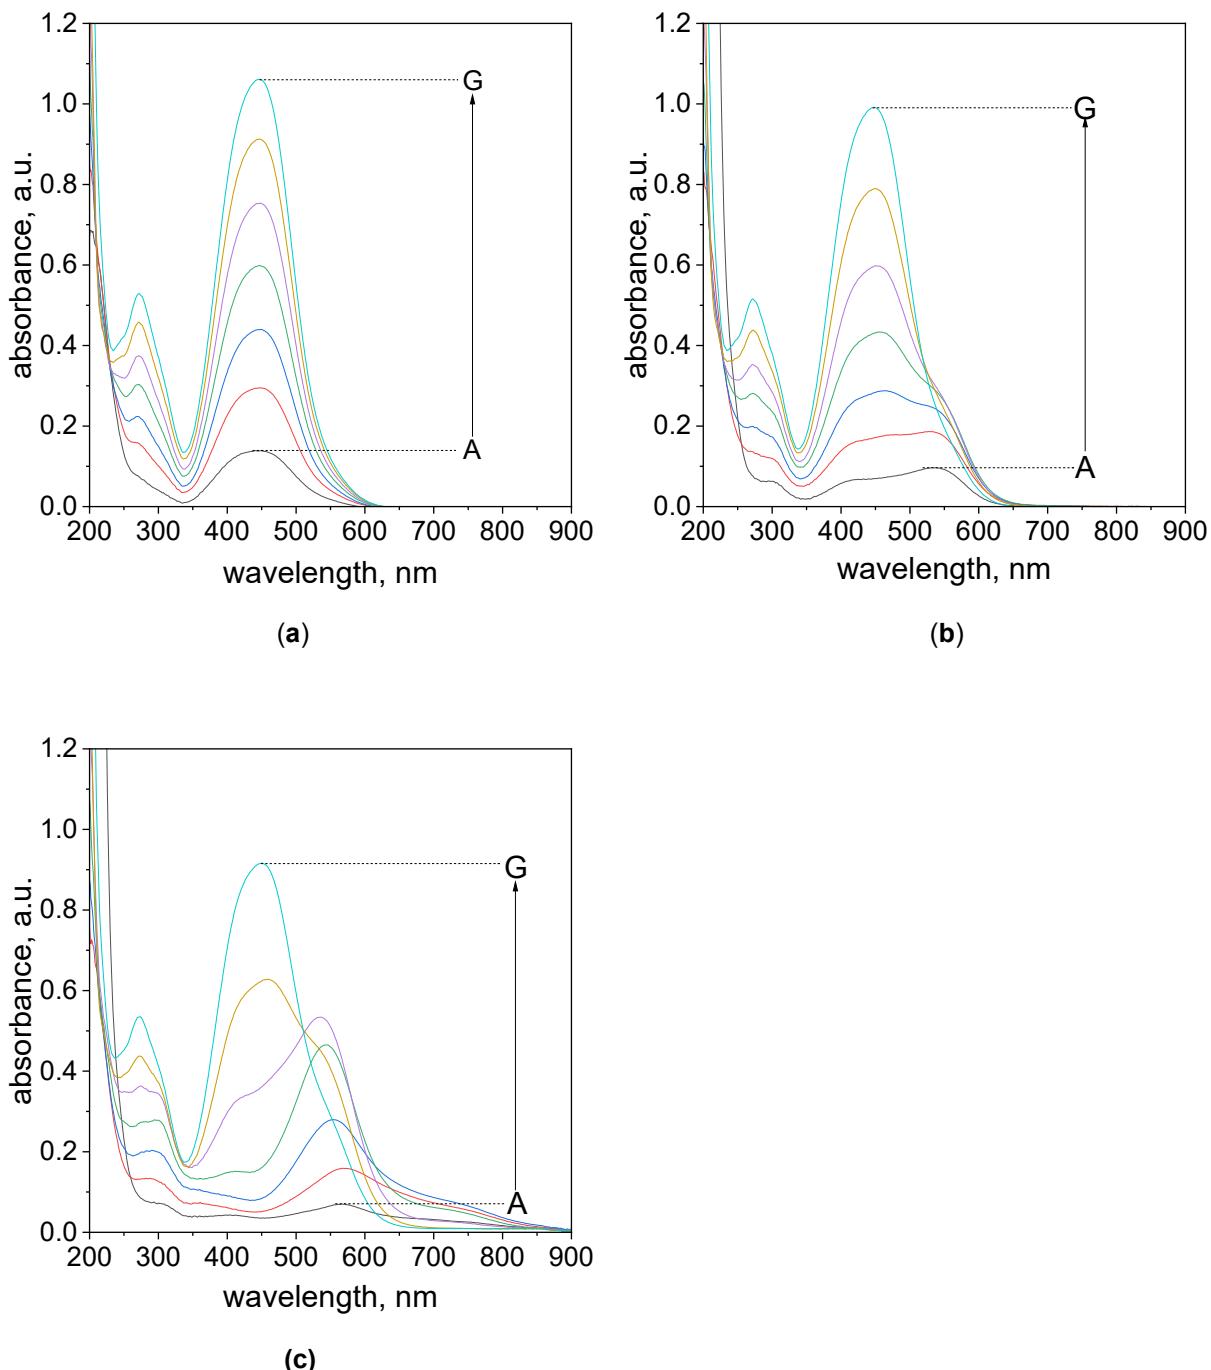

**Figure S7.** The spectra UV-Vis of Pd(II) aqueous solutions ( $\text{H}_2\text{O}$  as solvent) with different initial concentrations: A –  $5 \cdot 10^{-5}$  M; B –  $3.75 \cdot 10^{-5}$  M; C –  $3.125 \cdot 10^{-5}$  M; D –  $2.5 \cdot 10^{-5}$  M; E –  $1.875 \cdot 10^{-5}$  M (a), dependency of absorbance vs. initial concentrations of Pd(II) in the range  $1.875 \cdot 10^{-5}$  M to  $5 \cdot 10^{-5}$  M (b). Conditions:  $T = 20^\circ\text{C}$ , path length 1 cm.

The aqueous solutions of Pd(II) ions have a characteristic UV-Vis spectrum with two maximum and two shoulders (between 220 and 320 nm) (Fig. S7a). One strong peak is located at 209 nm whereas the second with small intensity at around 420 nm. Based on obtained spectra, the values of the molar coefficient were determined from the slope of the fitted curve to experimental data (Fig. S7b) and it equals  $\epsilon$  (209 nm) =  $26\ 547 \pm 449\ \text{M}^{-1}\cdot\text{cm}^{-1}$ . Registered UV-Vis spectra (Fig. S1a and S7a) of reagents show, that in the range of wavelength 200 – 350 nm they overlap.

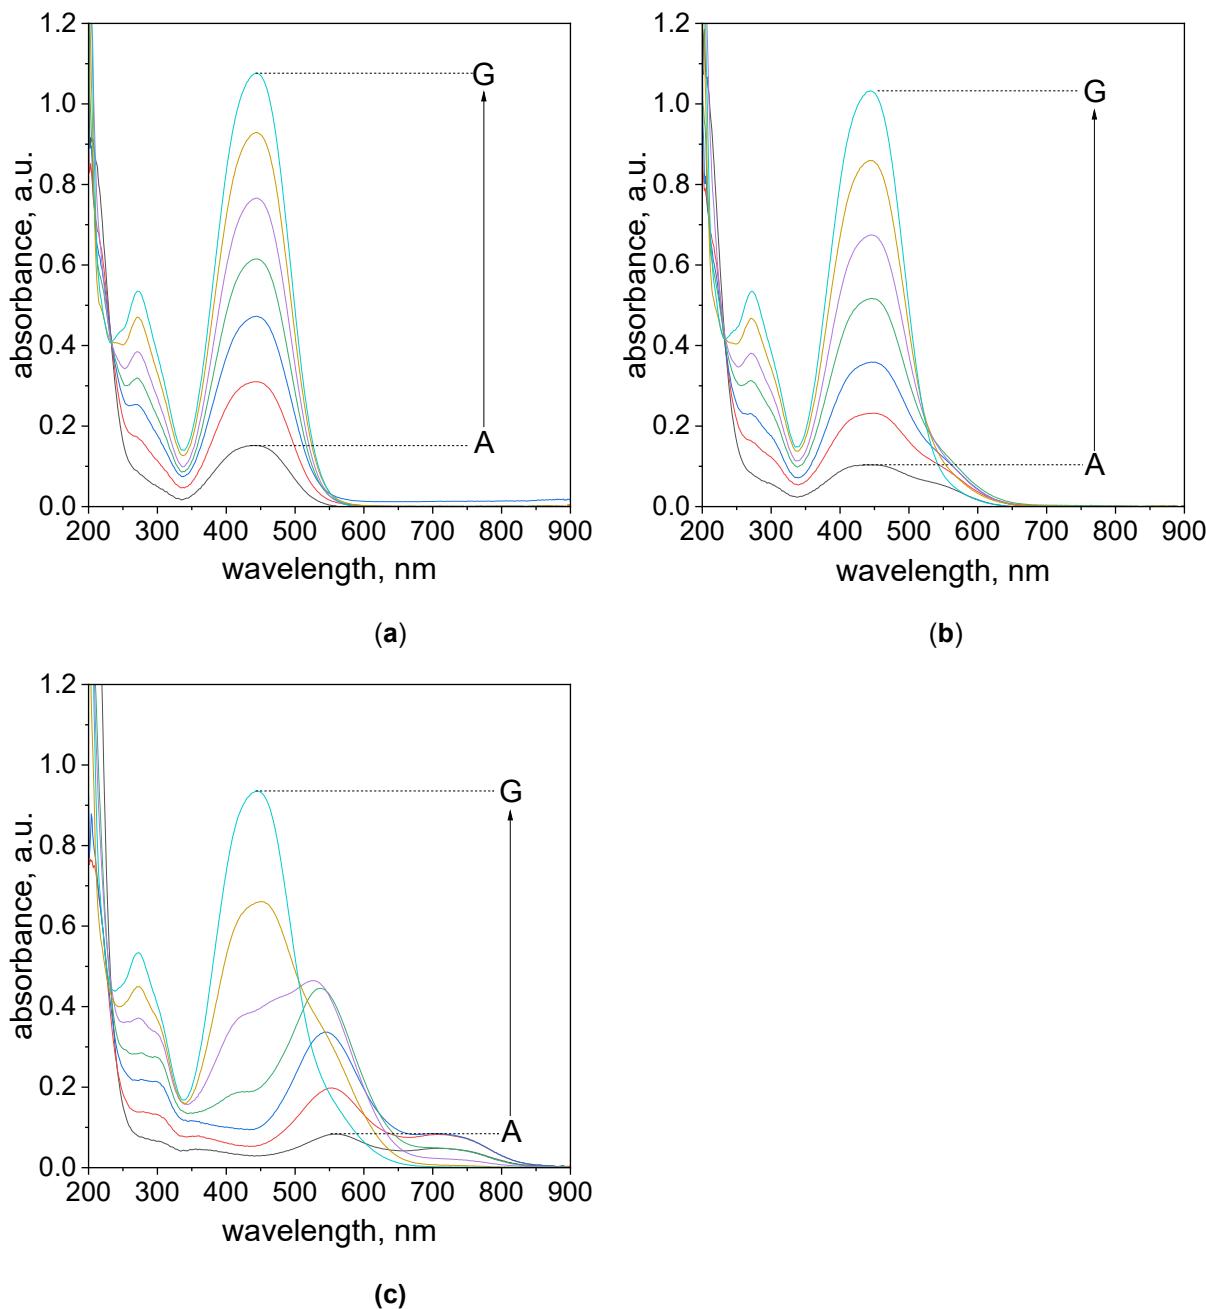

### 3. Metalorganic complex formation between Pd(II) and TR (at different pH)

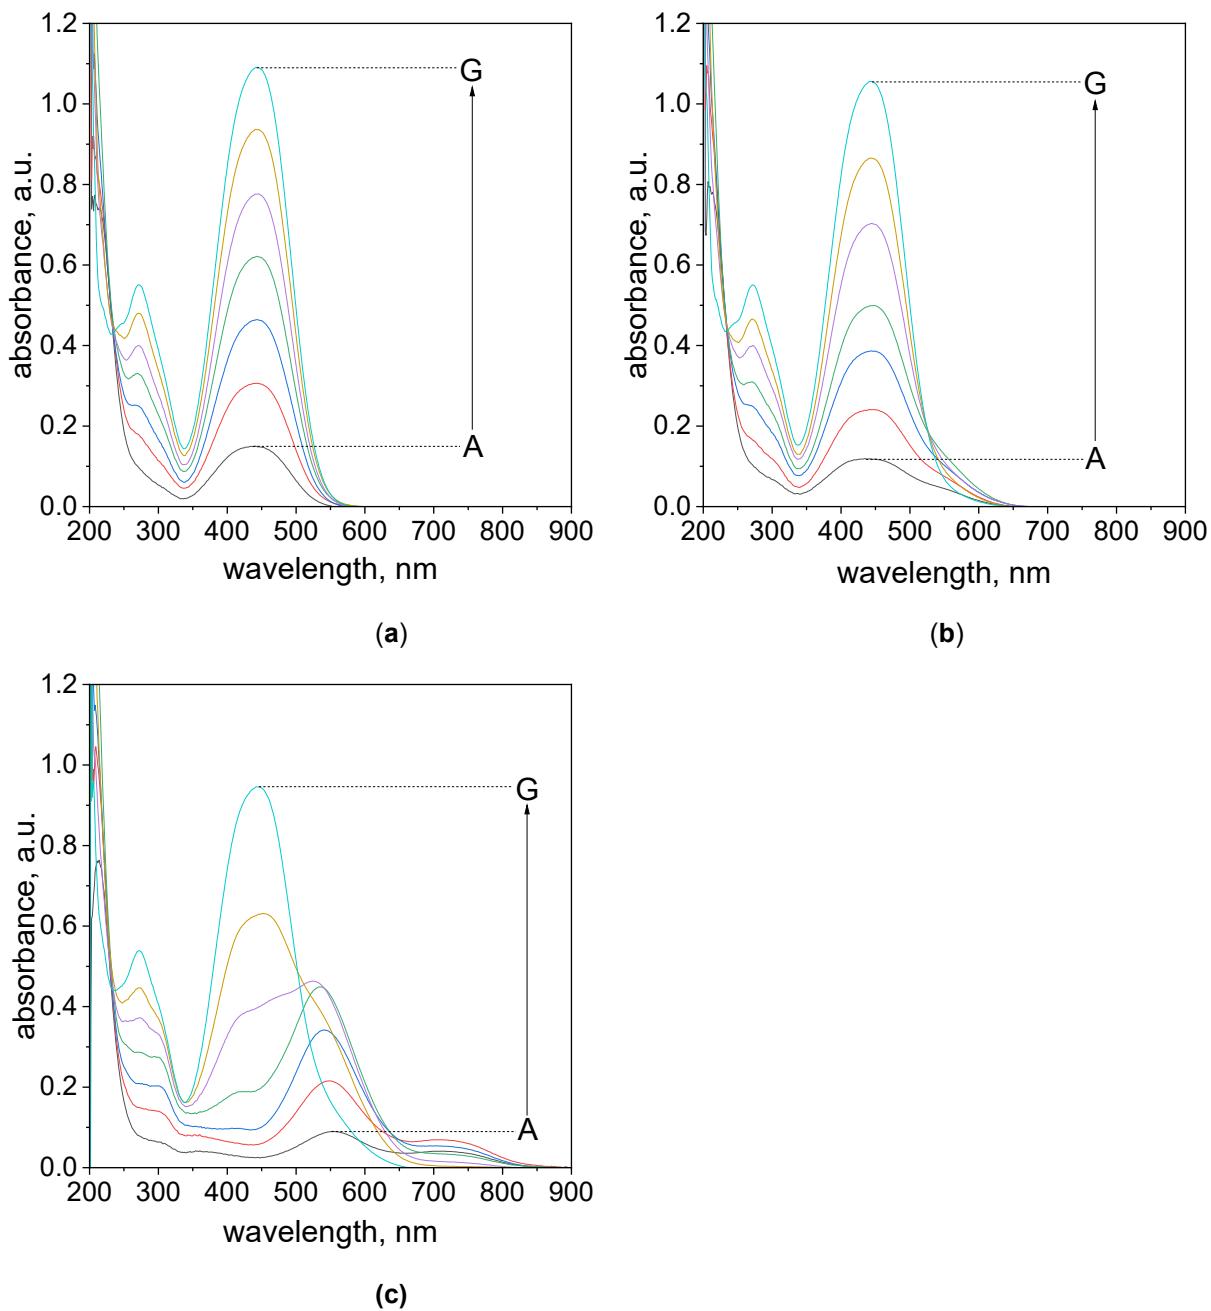

**Figure S8.** The UV-Vis spectra of solutions obtained after mixing of Pd(II) ions with tropaeolin at different volumetric ratio ( $V_{\text{Pd(II)}} : V_{\text{TR}}$ ): 3.5 : 0.5 (A); 3.0 : 1.0 (B); 2.5 : 1.5 (C); 2.0 : 2.0 (D), 1.5 : 2.5 (E); 1.0 : 3.0 (F), 0.5 : 3.5 (G) after: 5 min (a), 24 hours (b), 7days (c). Conditions:  $C_{0, \text{Pd(II)}} = C_{0, \text{TR}} = 5 \cdot 10^{-5} \text{ mol/dm}^3$  (before reagent mixing),  $T = 20^\circ\text{C}$ ,  $\text{pH} = 2.09$ .

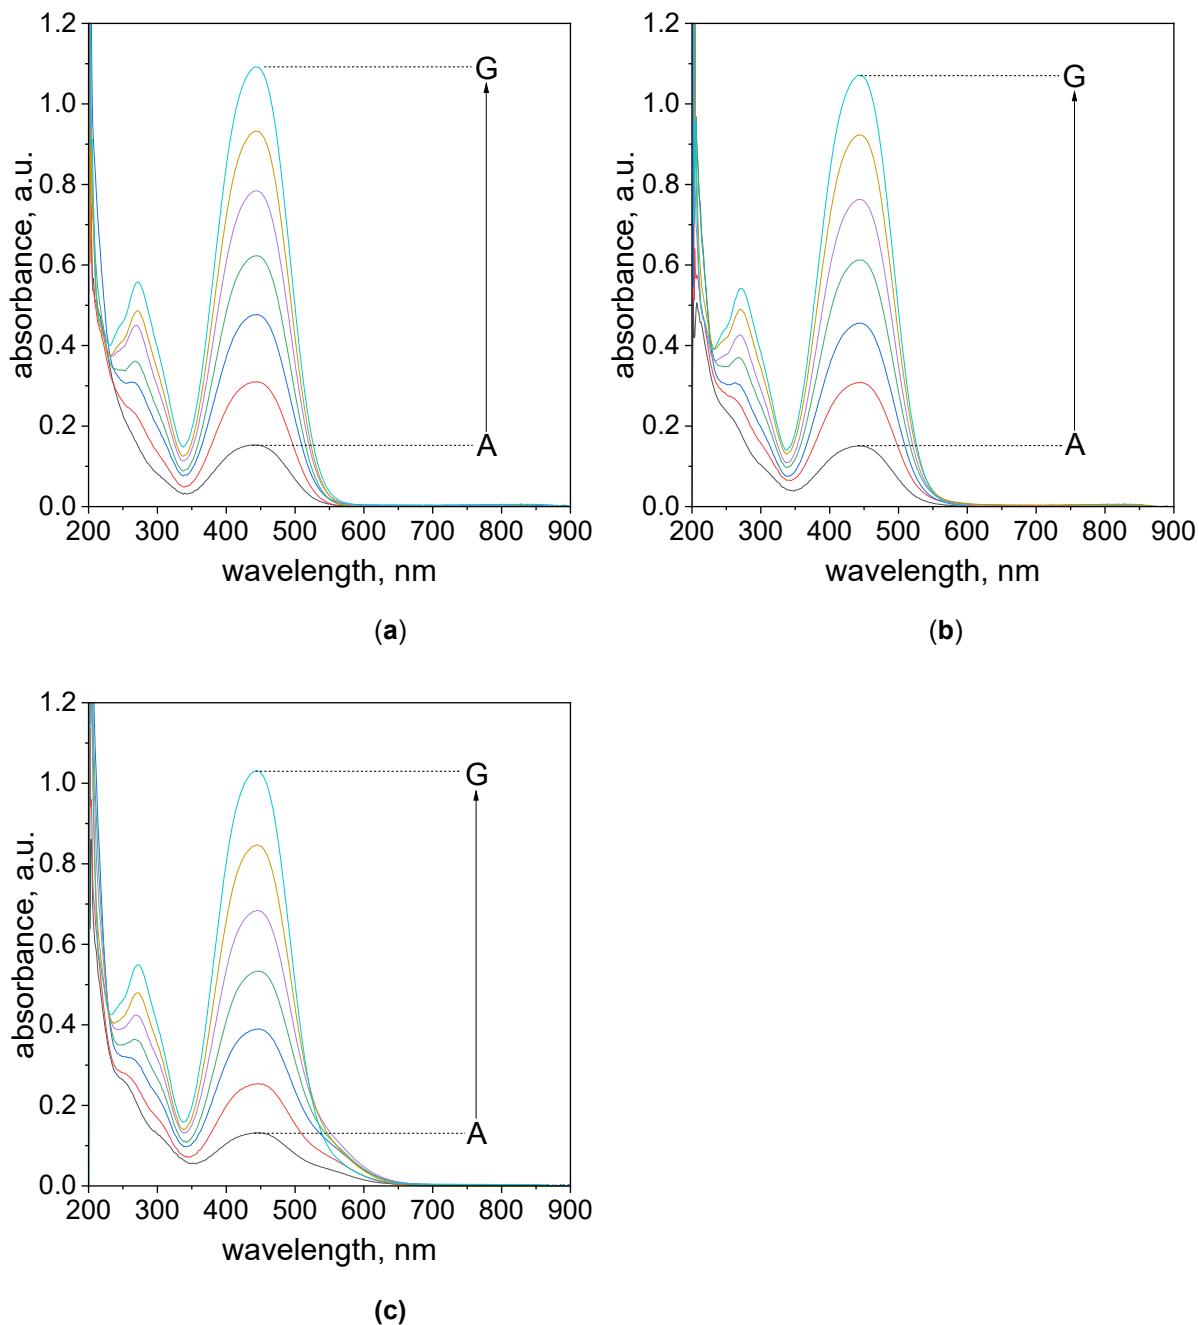

**Figure S9.** The UV-Vis spectra of solutions obtained after mixing of Pd(II) ions with tropaeolin at different volumetric ratio ( $V_{\text{Pd(II)}} : V_{\text{TR}}$ ) 3.5 : 0.5 (A); 3.0 : 1.0 (B); 2.5 : 1.5 (C); 2.0 : 2.0 (D), 1.5 : 2.5 (E); 1.0 : 3.0 (F), 0.5 : 3.5 (G) after: 5 min (a), 24 hours (b), 7days (c). Conditions:  $C_{0, \text{Pd(II)}} = C_{0, \text{TR}} = 5 \cdot 10^{-5} \text{ mol/dm}^3$  (before reagent mixing),  $T = 20^\circ\text{C}$ ,  $\text{pH} = 2.87$ .

**Figure S10.** The UV-Vis spectra of solutions obtained after mixing of Pd(II) ions with tropaeolin at different volumetric ratio ( $V_{\text{Pd(II)}} : V_{\text{TR}}$ ) 3.5 : 0.5 (A); 3.0 : 1.0 (B); 2.5 : 1.5 (C); 2.0 : 2.0 (D), 1.5 : 2.5 (E); 1.0 : 3.0 (F), 0.5 : 3.5 (G) after: 5 min (a), 24 hours (b), 7days (c). Conditions:  $C_0, \text{Pd(II)} = C_0, \text{TR} = 5 \cdot 10^{-5} \text{ mol/dm}^3$  (before reagent mixing),  $T = 20^\circ\text{C}$ ,  $\text{pH} = 4.10$ .

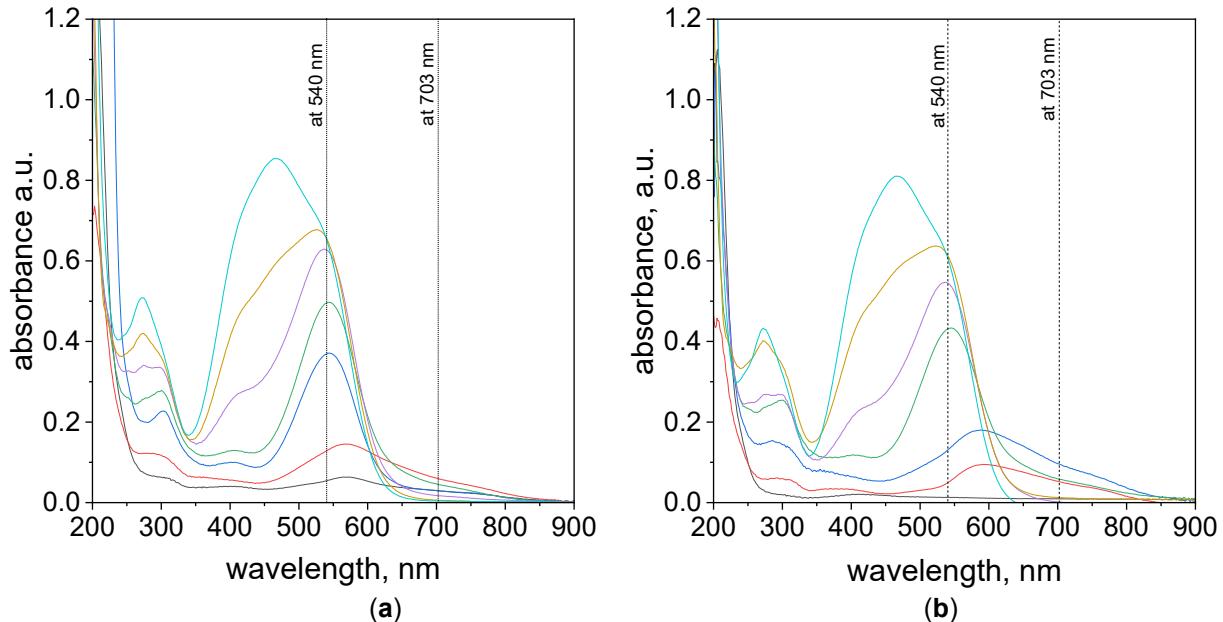

**Figure S11.** The UV-Vis spectra of solutions obtained after mixing of Pd(II) ions with tropaeolin at different volumetric ratio ( $V_{\text{Pd(II)}} : V_{\text{TR}}$ ) 3.5 : 0.5 (A); 3.0 : 1.0 (B); 2.5 : 1.5 (C); 2.0 : 2.0 (D), 1.5 : 2.5 (E); 1.0 : 3.0 (F), 0.5 : 3.5 (G) after: 5 min (a), 24 hours (b), 7days (c). Conditions:  $C_0, \text{Pd(II)} = C_0, \text{TR} = 5 \cdot 10^{-5} \text{ mol/dm}^3$  (before reagent mixing),  $T = 20^\circ\text{C}$ ,  $\text{pH} = 5.02$

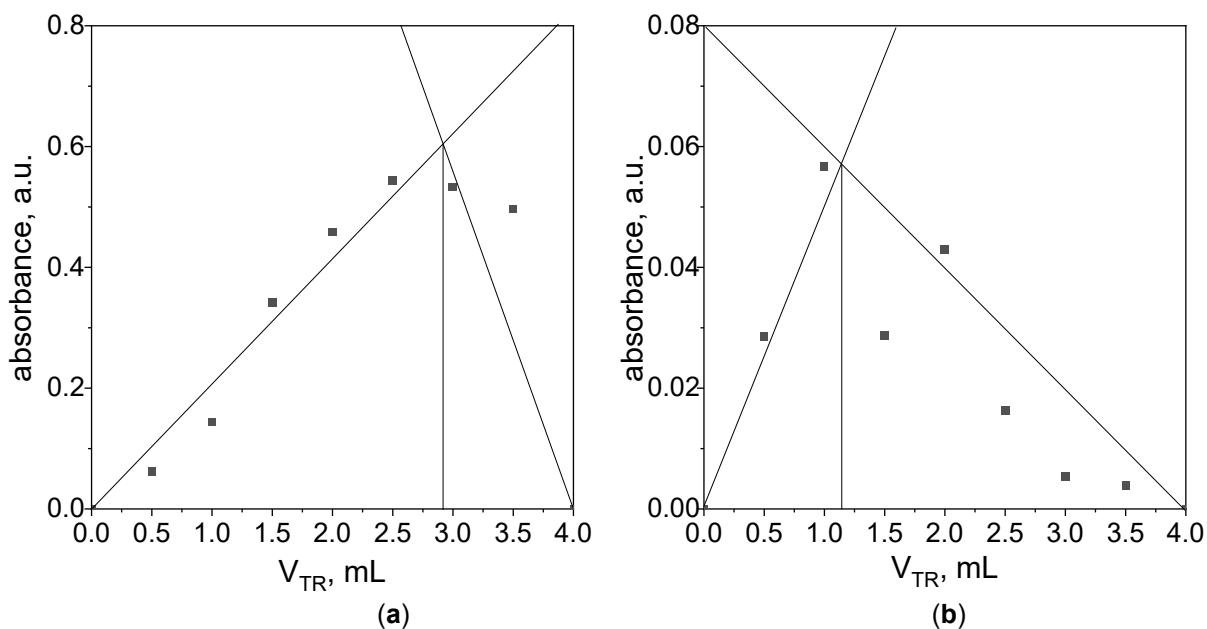

**Figure S12.** The UV-Vis spectra of solutions obtained after mixing of Pd(II) ions with tropaeolin at different volumetric ratio ( $V_{\text{Pd(II)}} : V_{\text{TR}}$ ) 3.5 : 0.5 (A); 3.0 : 1.0 (B); 2.5 : 1.5 (C); 2.0 : 2.0 (D), 1.5 : 2.5 (E); 1.0 : 3.0 (F), 0.5 : 3.5 (G) after: 5 min (a), 24 hours (b), 7days (c). Conditions:  $C_0, \text{Pd(II)} = C_0, \text{TR} = 5 \cdot 10^{-5} \text{ mol/dm}^3$  (before reagent mixing),  $T = 20^\circ\text{C}$ ,  $\text{pH} = 6.09$ .

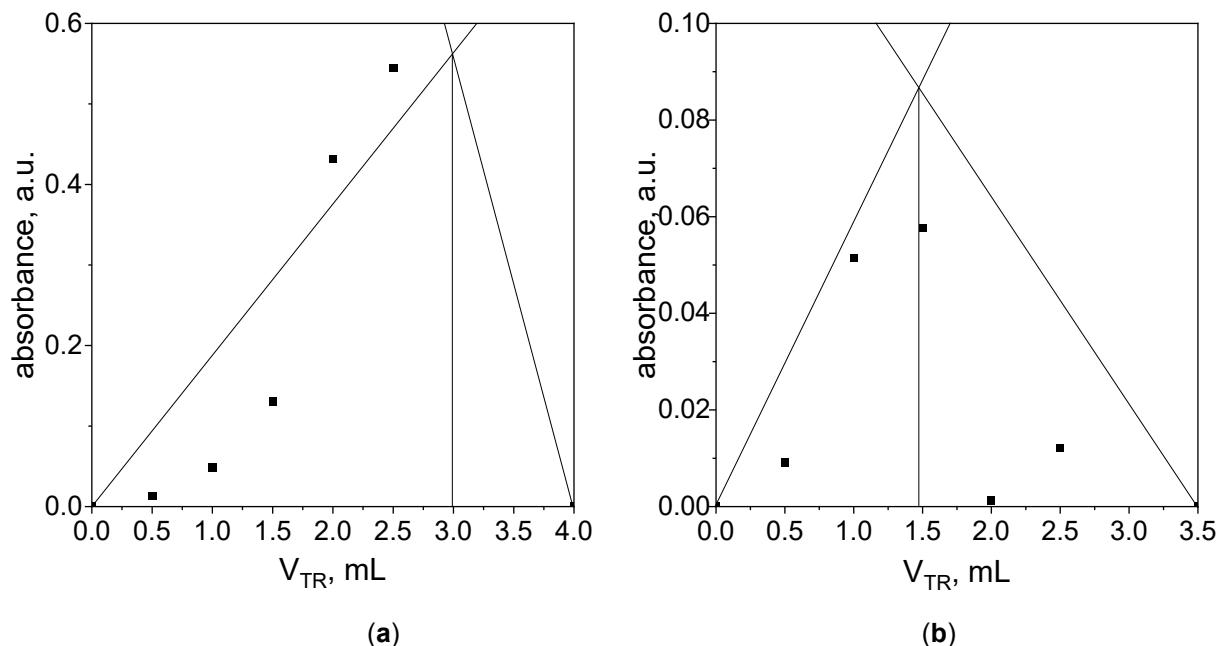

## Job's plot
