

Supplementary Figure S1

Representative histopathology images of kidneys (panels A-B) and liver (panels C-D) obtained from rats used for the *in vivo* evaluation of SuccFerr:RAME β CD anticancer activity in a murine glioblastoma model, and treated during 10 days with i.v. injections of SuccFerr:RAME β CD (1 mg/kg). A qualified senior pathologist (N.S.) did not observe any sign of toxicity in the kidneys and the livers of the animals treated by SuccFerr:RAME β CD, when compared to the control group.
