Table S1. Spectral-fluorescent properties of trimethine cyanine dyes in a complex with DNA (in the presence of high concentrations of DNA): maxima of the absorption and fluorescence spectra $\lambda_{\text{abs}}(\text{DNA})$ and $\lambda_{\text{fl}}(\text{DNA})$, respectively, spectral shifts upon the interaction with DNA $\Delta\lambda_{\text{abs}}$ and $\Delta\lambda_{\text{fl}}$, ratios of fluorescence intensities/quantum yields in the presence and in the absence of DNA $I_{\text{fl}}(\text{DNA})/I_{\text{fl}0}$ or $\Phi_{\text{fl}}(\text{DNA})/\Phi_{\text{fl}0}$; as well as dye–DNA binding constants K_b and limits of detection/quantification of DNA LOD/LOQ using the dyes as probes

Dye	$\lambda_{\text{abs}}(\text{DNA})$ ($\sim\Delta\lambda_{\text{abs}}$)	$\lambda_{\text{fl}}(\text{DNA})$ ($\sim\Delta\lambda_{\text{fl}}$)	$I_{\text{fl}}(\text{DNA})/I_{\text{fl}0}$ $\Phi_{\text{fl}}(\text{DNA})/\Phi_{\text{fl}0}$	K_b L mol ⁻¹	LOD/LOQ μmol L ⁻¹	Ref.
