a. The calibration curve established from three (n = 3) complete analyses of five calibration solutions (0.1, 0.25, 0.5, 0.75 and 1 mg mL⁻¹ concentrations prepared in acetone) in a day.

b. Calibration range was from 0.1 mg mL⁻¹ to 1 mg mL⁻¹.

c. The value of %RSD of concentration established from three (n = 3) complete analyses of each sample in a day. The concentration was 0.75 mg mL⁻¹.

d. The value of %RSD of concentration established from three complete analyses repeated tree consecutive days (n = 9). The concentration was 0.75 mg mL⁻¹.

e. The value of %RSD of retention time and concentration established from seven (n = 7) complete analyses of each sample in a day. The concentration was 0.5 mg mL⁻¹.

f. Percentage of average accuracy of concentration established from three (n = 3) complete analyses of five calibration solutions in a day.

Table S2 Limit of detection (LOD) and limit of quantification (LOQ) values for components in the BAME CP Mix determined by GC-MS using the optimized method for the SLB-IL111 GC column. The optimized experimental conditions are detailed in Materials and Methods.

| Fatty acids | LOD ($\mu\text{g mL}^{-1}$) ^a | LOQ ($\mu\text{g mL}^{-1}$) ^b |
|----------------|--|--|
| C11:0 | 0.08 | 0.25 |
