Supplementary information

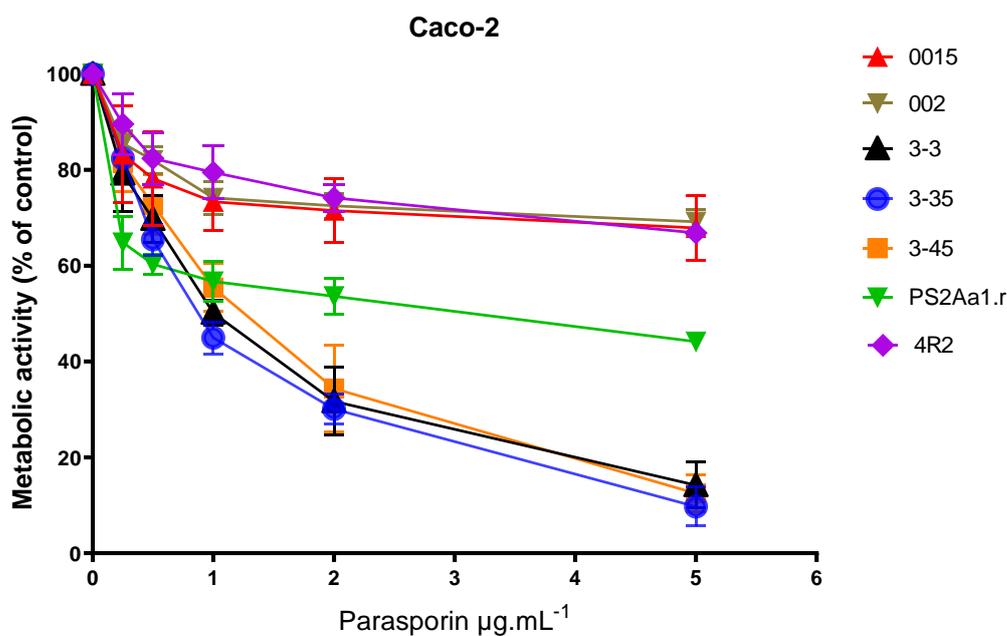

Figure S1: Cytocidal activities of variants of Parasporin 2 (PS2Aa1) obtained with site directed mutagenesis to CaCo2 cell lines. the toxin activated with proteinase K was added (final concentrations, 0.2µg/mL to 5µg/mL).

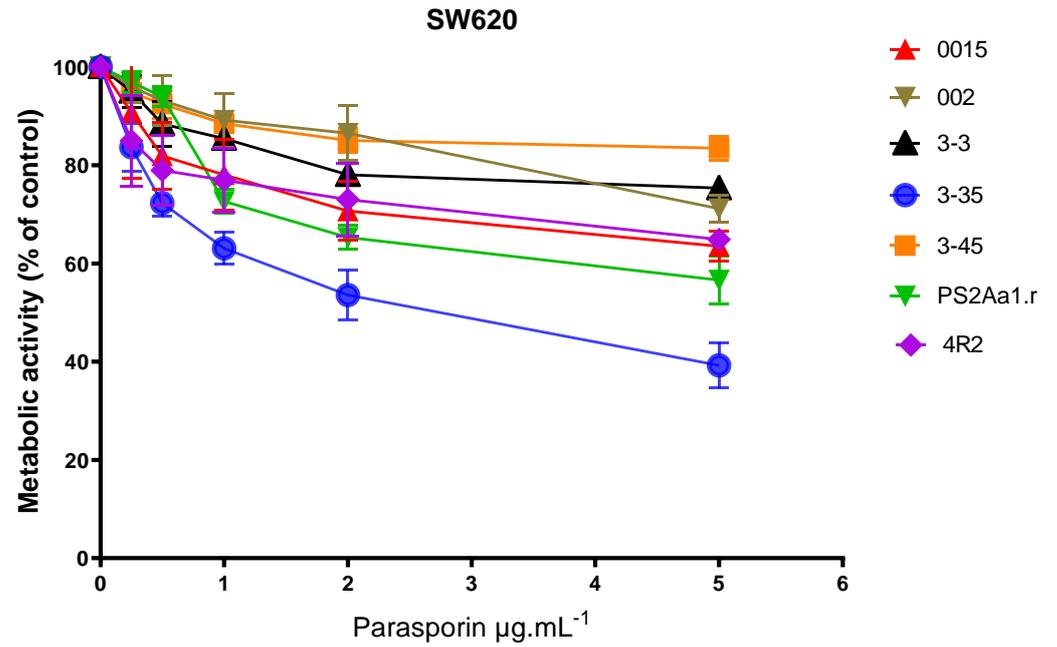

Figure S2: Cytocidal activities of variants of Parasporin 2 (PS2Aa1) obtained with site directed mutagenesis to SW620 cell lines. the toxin activated with proteinase K was added (final concentrations, 0.2 $\mu\text{g/mL}$ to 5 $\mu\text{g/mL}$).

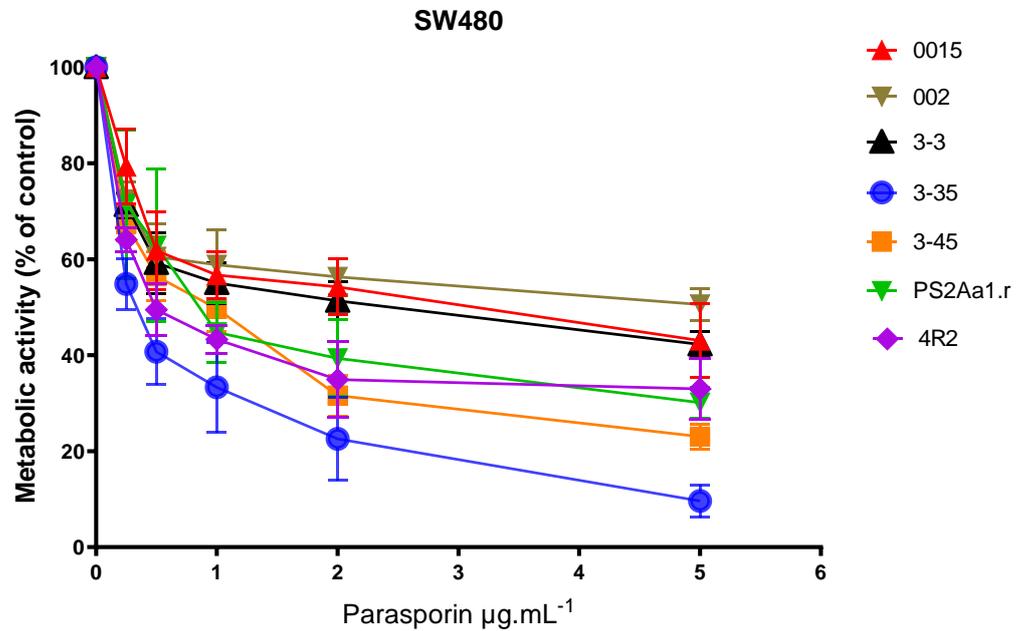

Figure S3: Cytocidal activities of variants of Parasporin 2 (PS2Aa1) obtained with site directed mutagenesis to SW480 cell lines. the toxin activated with proteinase K was added (final concentrations, 0.2 $\mu\text{g/mL}$ to 5 $\mu\text{g/mL}$).

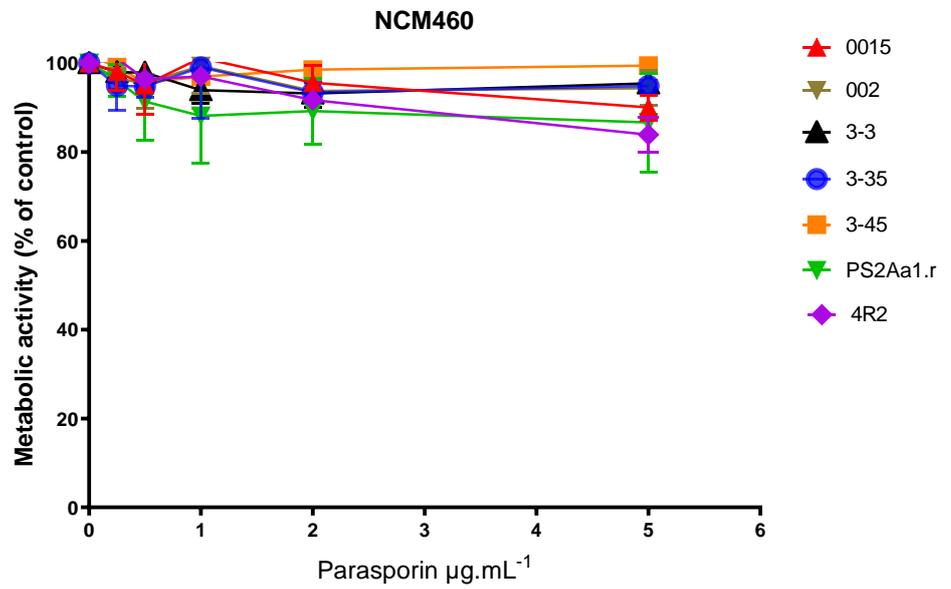

Figure S4: Cytocidal activities of variants of Parasporin 2 (PS2Aa1) obtained with site directed mutagenesis to NCM460 cell lines. the toxin activated with proteinase K was added (final concentrations, 0.2 $\mu\text{g/mL}$ to 5 $\mu\text{g/mL}$).
