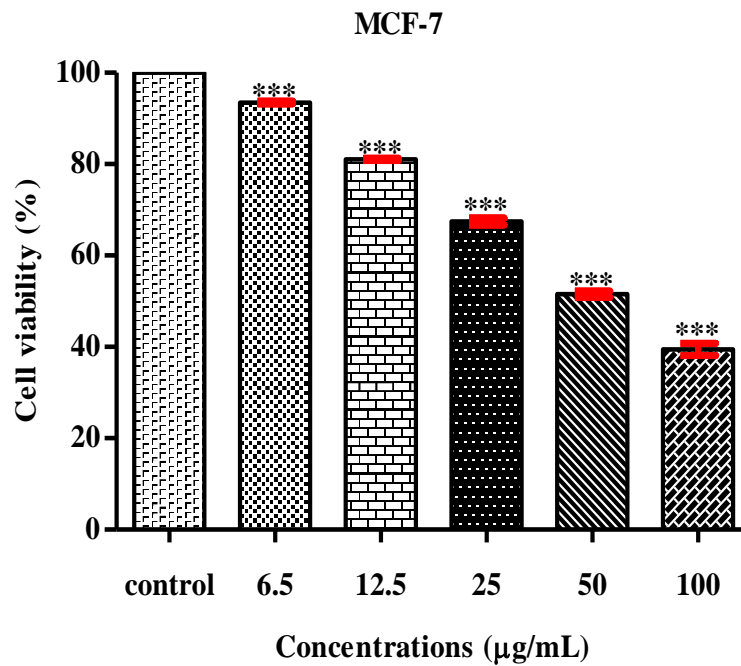

**Figure S1.** Antioxidant activity of AgNPs synthesized using *K. sumatrensis* aqueous leaf extracts (Ks-ALE). (a) DPPH radical scavenging activity. The values are expressed as mean  $\pm$  SD values and analyzed by Two-Way analysis of variance (ANOVA). Asterisk (\*\*\*) indicates significant different among treatments with respect to control ( $p < 0.001$ ).

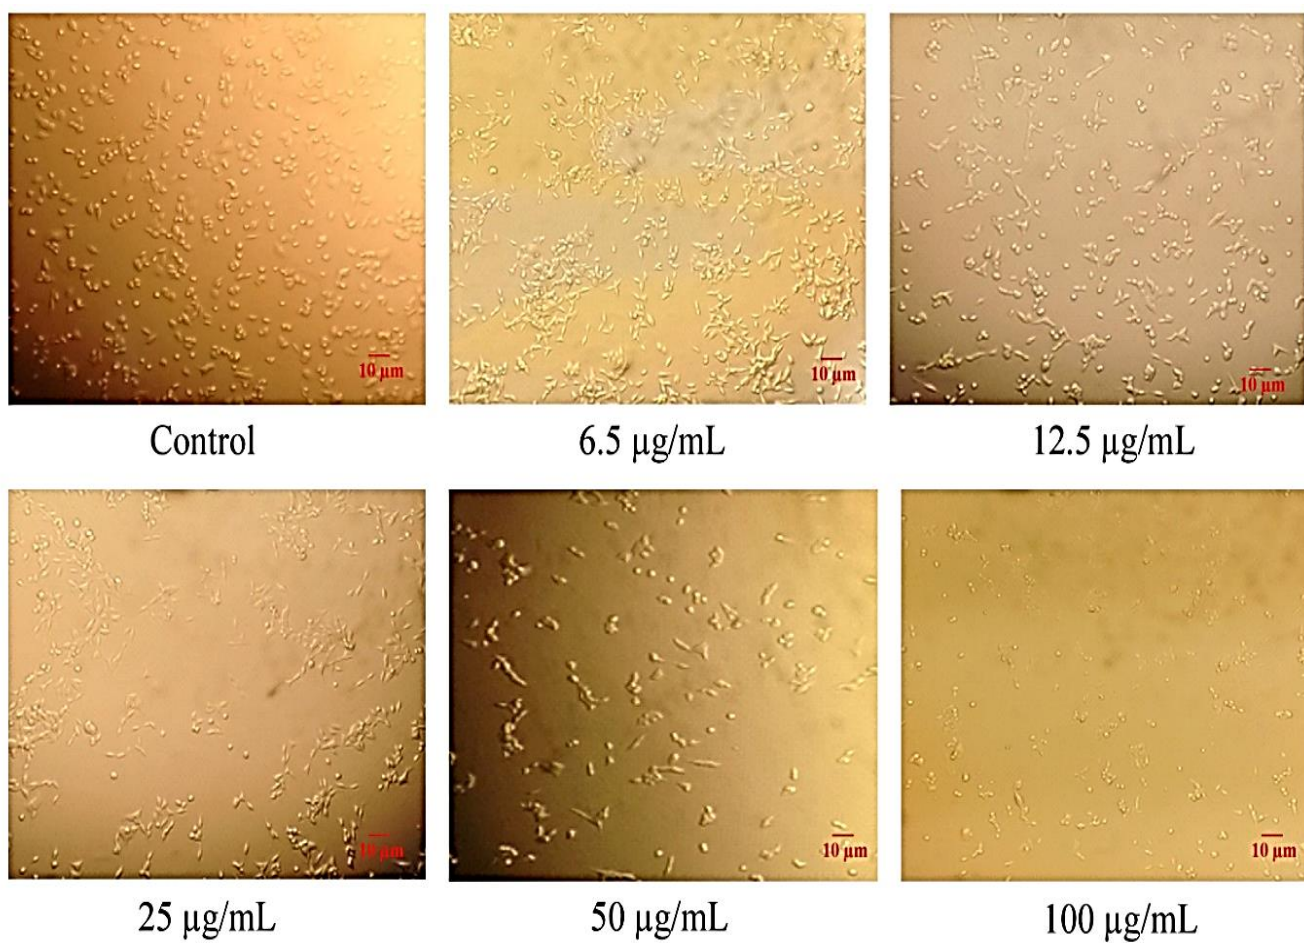

**Figure S2.** Antioxidant activity of AgNPs synthesized using *K. sumatrensis* aqueous leaf extracts (Ks-ALE) (b) ABTS radical scavenging activity. The values are expressed as mean  $\pm$  SD values and analyzed by Two- Way analysis of variance (ANOVA). Asterisk (\*\*\*) indicates significant different among treatments with respect to control ( $p < 0.001$ ).

**Figure S3.** Antioxidant activity of AgNPs synthesized using *K. sumatrensis* aqueous leaf extracts (Ks-ALE) (c) Hydroxyl scavenging activity. The values are expressed as mean  $\pm$  SD values and analyzed by Two-Way analysis of variance (ANOVA). Asterisk (\*\*\*) indicates significant different among treatments with respect to control ( $p < 0.001$ ).

**Figure S4.** MTT assay confirming the Anti-proliferative effects of AgNPs using aqueous leaf extracts of *K. sumatrensis* (Ks-ALE) against MCF-7 cell line. The values are expressed as mean  $\pm$  SD values and analyzed by One - way analysis of variance (ANOVA). Asterisk (\*\*\*) indicates significant different among treatments with respect to control ( $p < 0.001$ ).

**Figure S5.** Anti-proliferative observed from confocal microscope (340 pixel); Control and various concentrations (6.5, 12.5, 25, 50 and 100  $\mu\text{g/mL}$ ) of *K. sumatrensis* aqueous leaf extract (Ks-ALE) of AgNPs treated on breast cancer cells (MCF-7).
