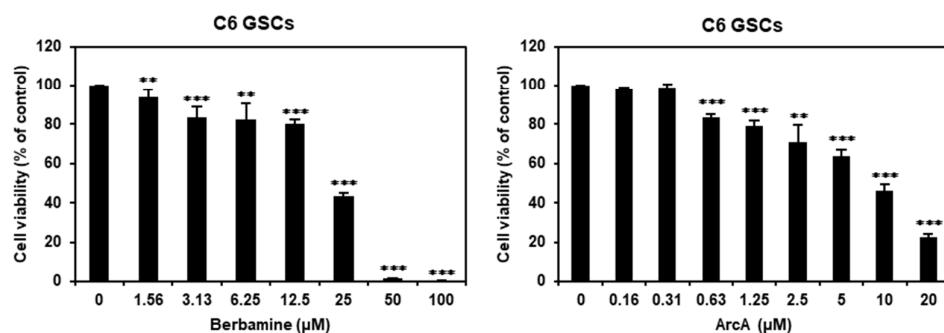

Figure S1. Effect of berbamine and ArcA on the viability of GSCs. **(A)** U87MG-derived GSCs were treated with the indicated concentrations of berbamine or ArcA for 7 days. **(B)** C6-derived GSCs were treated with the indicated concentrations of berbamine or ArcA for 7 days. Cell viability was measured using the CellTiter-Glo® luminescent assay system. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$ vs. the control.

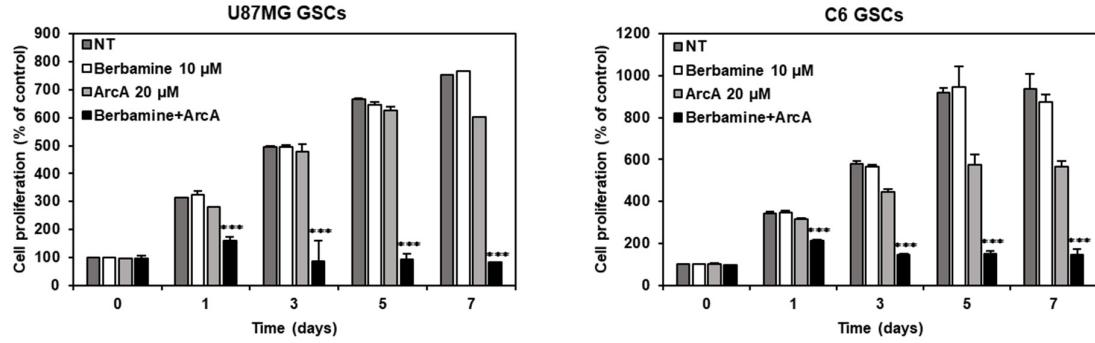

Figure S2. Effect of combined treatment with berbamine and ArcA on the proliferation of GSCs. U87MG- and C6-derived GSCs were treated with 10 μ M berbamine and 20 μ M ArcA for 7 days and cell proliferation was measured using the ATP-monitoring luminescence assay. *** $p < 0.001$ vs. the compound alone.

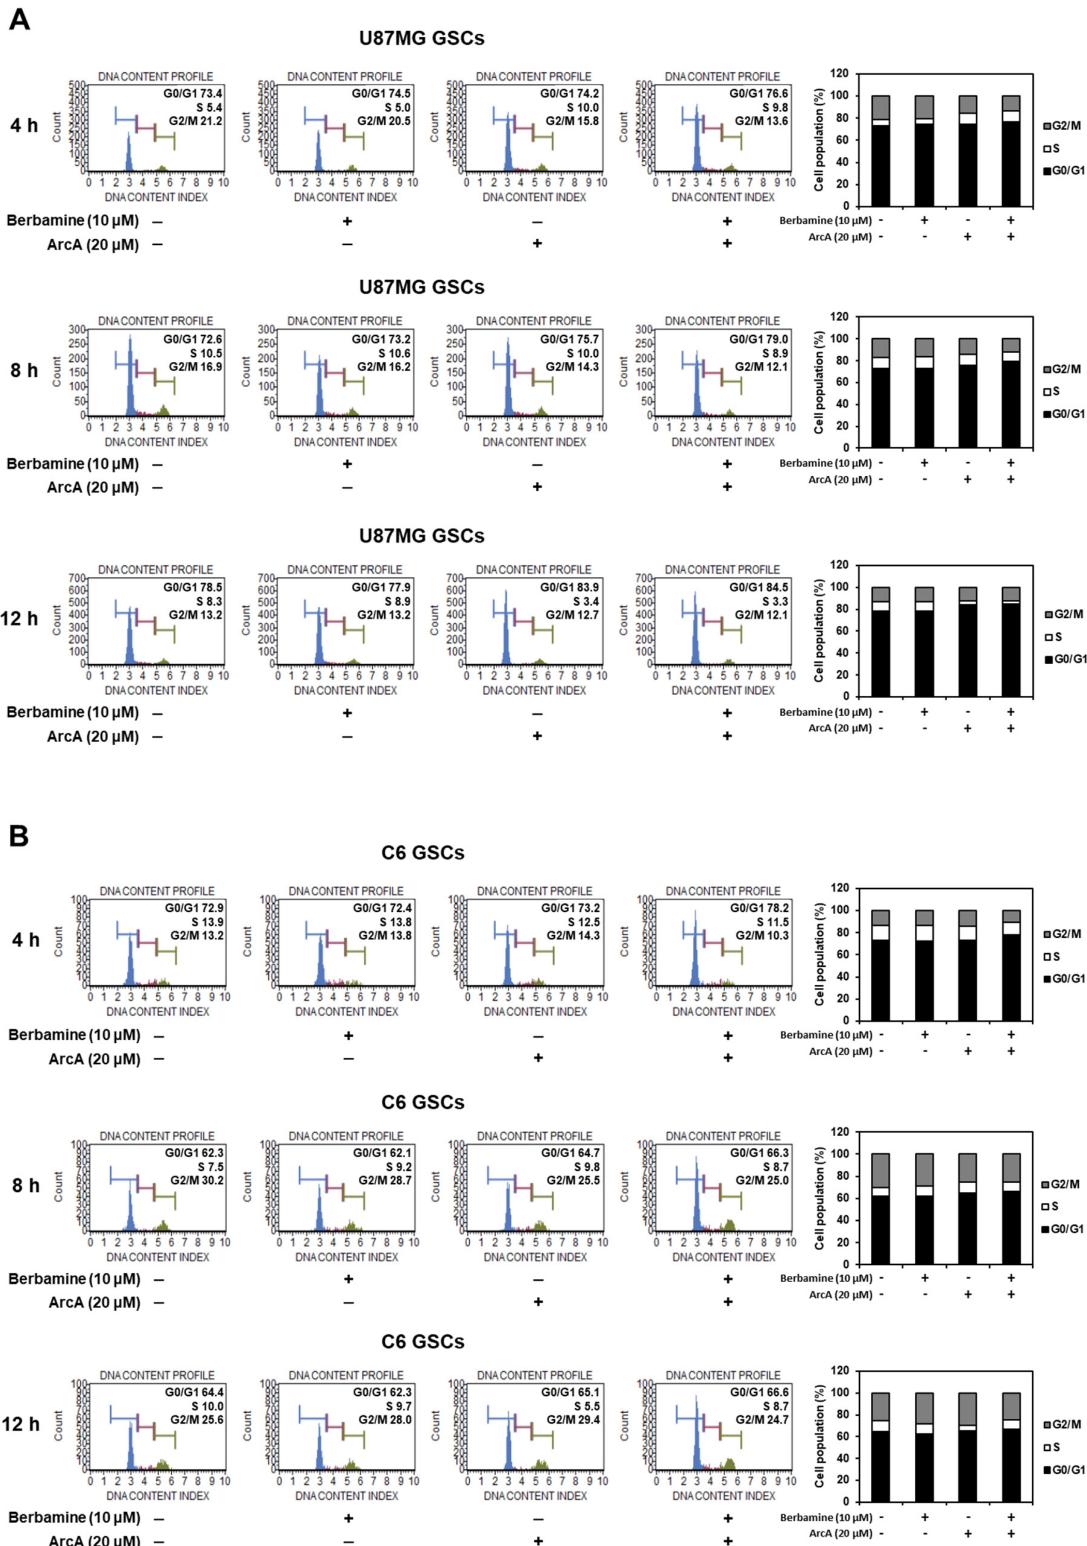

Figure S3. Effect of combined treatment with berberine and ArcA on the cell cycle in GSCs. **(A)** U87MG- and **(B)** C6-derived GSCs were treated with berberine (10 μ M) and ArcA (20 μ M) for 4, 8, and 12 h. Cell cycle distribution was detected using a Muse Cell Analyzer with Muse® Cell Cycle kit.
