**Table S1.** Accuracy (Recovery %), Precision (Repeatability and Intermediate precision) and Limits of Detection (LOD) and Quantification (LOQ) of the Analytical Procedure for the determination of quercetin in *A. cepa* Golden variety tunicate bulb, bulb, and tunic extracts.

		Concentration Range	Quercetin
Accuracy	Recovery % <sup>1</sup>	5.0	95.1
		50.0	98.0
		200.0	106.1
Precision <sup>2</sup>	Repeatability (RSD%) <sup>3</sup>	5.0	0.39
		50.0	0.41
		200.0	0.52
	Intermediate Precision (RSD%) <sup>4</sup>	5.0	0.45
		50.0	1.06
		200.0	1,21
LOD (µg/mL) <sup>5</sup>		0.035	
LOQ (ug/mL) <sup>5</sup>		0.106	

<sup>1</sup> The accuracy of the method for the determination of quercetin was measured through a recovery assay, where spiked onion extracts at the same concentration levels as the standard quercetin concentrations were analyzed. The study was performed in triplicate, and the accuracy is expressed as a percentage of the amount recovered compared with the standard concentrations. <sup>2</sup> The precision was evaluated using the measurements of the repeatability (intraday) and intermediate precision (interday). <sup>3</sup> The repeatability was investigated using three replicate injections of each spiked sample at the same concentration levels that were used in the accuracy study. <sup>4</sup> The intermediate precision was determined after two consecutive days using freshly prepared solutions at the same concentration levels used for the repeatability study. The results are expressed as the relative standard deviation percentage of the measurements (RSD%). <sup>5</sup> The limit of detection (LOD) and limit of quantification (LOQ) were estimated using the calibration curves, from which the average of the slope (S) and the standard deviation of intercept (δ) were calculated. LOD and LOQ were obtained as follows: LOD = 3.3δ/S, LOQ = 10δ/S.

**Table S2.** Statistical analysis of quantification of total content of polyphenols (expressed as equivalent mg of gallic acid).

Tukey's multiple comparisons test	Mean Diff,	95,00% CI of diff,	Significant t?	Summary	Adjusted P Value
ONION VARIETY 1 vs. ONION VARIETY 2	8.26	6,055 to 10,46	Yes	****	<0,0001
ONION VARIETY 1 vs. ONION VARIETY 3	30.22	28,02 to 32,43	Yes	****	<0,0001
ONION VARIETY 1 vs. ONION VARIETY 4	26.66	24,46 to 28,87	Yes	****	<0,0001
ONION VARIETY 2 vs. ONION VARIETY 3	21.96	19,76 to 24,17	Yes	****	<0,0001
ONION VARIETY 2 vs. ONION VARIETY 4	18.4	16,20 to 20,61	Yes	****	<0,0001
ONION VARIETY 3 vs. ONION VARIETY 4	-3.56	-5,765 to -1,355	Yes	**	0.0038
Test details	Mean 1	Mean 2	Mean Diff,	SE of diff,	n1
ONION VARIETY 1 vs. ONION VARIETY 2	44.03	35.77	8.26	0.6885	3
ONION VARIETY 1 vs. ONION VARIETY 3	44.03	13.8	30.22	0.6885	3
ONION VARIETY 1 vs. ONION VARIETY 4	44.03	17.36	26.66	0.6885	3
ONION VARIETY 2 vs. ONION VARIETY 3	35.77	13.8	21.96	0.6885	3
ONION VARIETY 2 vs. ONION VARIETY 4	35.77	17.36	18.4	0.6885	3
ONION VARIETY 3 vs. ONION VARIETY 4	13.8	17.36	-3.56	0.6885	3

Ordinary one-way ANOVA: Multiple comparisons; Number of families 1; Number of comparisons per family 6; Alpha 0.05.

**Table S3.** Statistical analysis of quantification of total content of quercetin derivatives expressed as quercetin equivalent (mg/g).
