2. X-ray crystal structure of **3aa**

Single crystals of compound **3aa** were prepared through dissolving the sample in mixture solvent of EtOH at room temperature and crystallizing by slow evaporation of solvent. A suitable crystal was selected for structure determination on an 'Oxford Gemini E' diffractometer. The crystal was kept at 293 K during data collection. Using Olex2¹, the structure was solved with the ShelXT² structure solution program using Intrinsic Phasing and refined with the ShelXL³ refinement package using Least Squares minimisation.
