

Supplementary Materials

Zinc-doped iron oxide nanoparticles as a proton-activatable agent for dose range verification in proton therapy

1. IONP@Zn-cit colloidal stability in cell culture medium

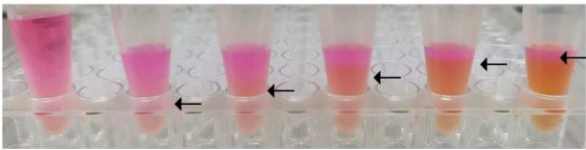

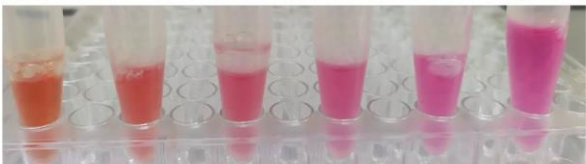

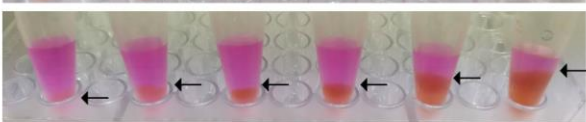

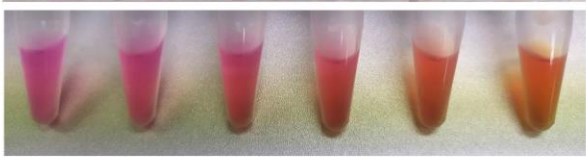

IONP@Zn-cit ($\mu\text{gZn/mL}$)	20.81	41.61	83.22	166.44	332.88	665.75
SD	0.84	1.68	3.36	6.72	13.44	26.87
Incubation time	Medium					
3 hours	No FBS					
	10% FBS					
7 days	No FBS					
	10% FBS					

Figure S1. Visual follow-up of zinc doped iron oxide nanoparticles capped with citrate (IONP@Zn-cit) in concentrations between $(20.81 \pm 0.84$ and $665.75 \pm 26.87 \mu\text{g Zn/ml})$ after 3 hours and 7 days incubations in cell culture medium with and without FBS supplementation. Arrows point phase changes produced by nanoparticle precipitation.

2. Radioactivity profile of ^{67}Ga after ^{67}Ga -IONP@Zn-cit purification

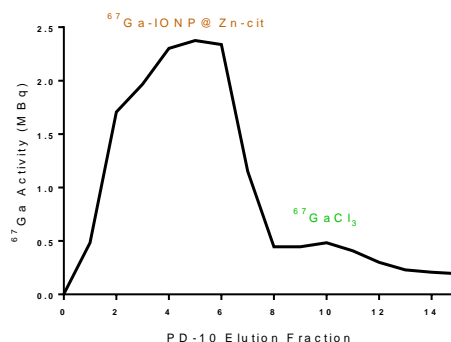

Figure S2. Radio-chromatogram of ^{67}Ga -IONP@Zn-cit purification after microwave synthesis. Activity (in MBq) present in the fractions (1-15) obtained after purification of the ^{67}Ga -IONP@Zn-cit synthesis mixture by gel filtration with PD-10 columns (Sephadex G-25M). The first peak corresponds to purified ^{67}Ga -IONP@Zn-cit and the second one to free gallium-67 in chloride form.

3. Biodistribution and pharmacokinetic studies of ^{67}Ga -IONP@Zn-cit

Table S1. ^{67}Ga -IONP@Zn-cit biodistribution values of different tissues after each time point (6 hours, 1, 3, and 7 days), calculated as percentage of injected dose per gram of tissue (%ID/g) with the standard deviation (SD) between animals.

Time	6h		1d		3d		7d	
Tissues	%ID/g	SD	%ID/g	SD	%ID/g	SD	%ID/g	SD
Total Blood	4.382	1.061	0.389	0.051	0.187	0.024	0.126	0.025
Plasma	7.642	2.123	0.646	0.087	0.320	0.036	0.208	0.037
Heart	1.441	0.352	1.118	0.520	0.558	0.069	0.410	0.137
Lungs	2.244	0.331	1.505	0.408	0.945	0.288	0.605	0.143
Liver	26.983	9.220	33.718	1.616	26.692	1.133	17.934	4.664
Spleen	17.346	5.581	32.238	2.050	28.915	4.266	16.958	2.616
Stomach	1.016	0.377	2.426	1.942	1.786	0.711	0.759	0.494
Pancreas	0.747	0.121	0.588	0.421	0.978	0.425	0.728	0.020
Guts	1.528	0.372	1.925	0.557	1.410	0.194	0.781	0.167
Kidneys	2.249	0.673	1.977	0.103	1.511	0.076	1.076	0.195
Brain	0.116	0.010	0.062	0.026	0.050	0.023	0.036	0.009
Bone	2.989	0.620	4.412	0.072	2.997	2.171	1.849	0.803
Tumor	0.793	0.126	0.951	0.080	0.921	0.168	0.613	0.024

Table S2. Accumulation of radioactivity (in %ID/g, expressed as mean \pm SD) and calculated ^{67}Ga -IONP@Zn-cit (in μg Zn or Fe per gram) in tumor tissues after times (0.25, 1, 3 and 7 days) post probe administration (^{67}Ga -IONP@Zn-cit containing 158 μg Zn and 103.5 μg Fe).

Time (days)	Tumor Accumulation	^{67}Ga -IONP@Zn-cit Concentration	
	%ID/g	μg Zn/g	μg Fe/g
0.25	0.79 \pm 0.13	1.26	0.82
1	0.95 \pm 0.08	1.51	0.98
3	0.92 \pm 0.17	1.46	0.95
7	0.61 \pm 0.02	0.97	0.63

4. X-ray Irradiation

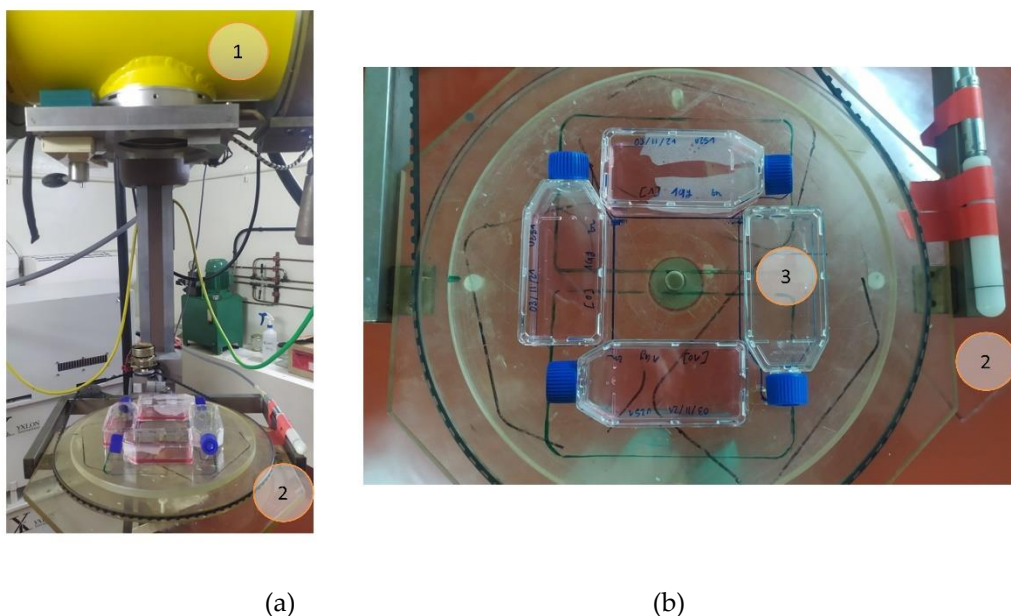

Figure S3. (a) General view of the irradiation system with the X-ray tube (1). An ionizing chamber (2) was used for dose irradiation control measurements. (b) Top view of the position of four 25 cm² Flask bottles (3) to perform clonogenic assays with nanoparticles. The bottles were forming a square at the same distance from the center of the beam to have the same irradiation dose for all cells seeded.

5. Proton Irradiation

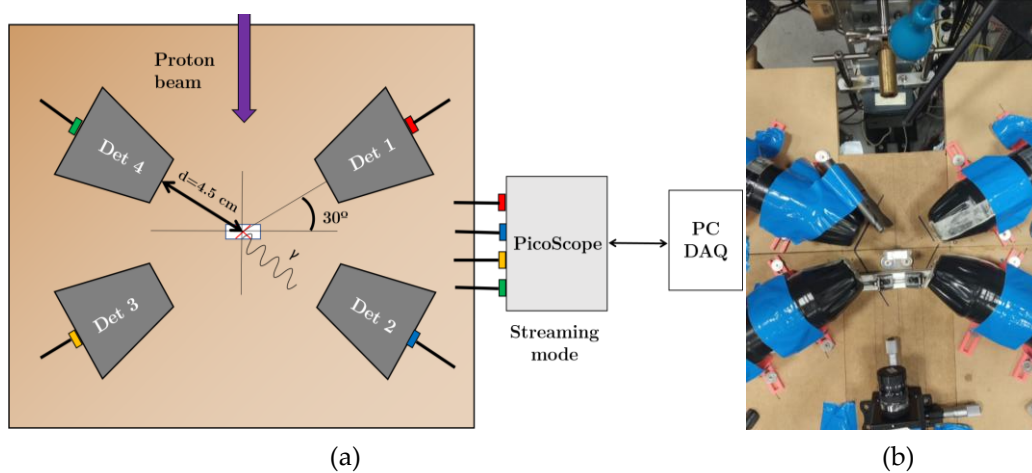

Figure S4. (a) Scheme of the general view of the irradiation system with the proton beam and the four LaBr₃(Ce)-based detectors. (b) Top view of the real position of a sample in front of the beam and between the detectors.
